

Encourage Humana Healthy Horizons-covered patients to get their flu shot and get on with life more safely.

The Centers for Disease Control and Prevention (CDC) encourages healthcare providers to begin their influenza vaccination planning efforts now and vaccinate patients as indicated once the vaccines become available.<sup>1</sup> The CDC recommends immunization with the updated 2025-26 flu vaccines to protect against flu for this coming fall and winter.<sup>1</sup>

Humana Healthy Horizons® follows the CDC guideline that anyone 6 months and older receive an annual flu vaccine. The current flu vaccine covers the most common strains in the Northern Hemisphere, as identified by the CDC.<sup>1</sup>

### Egg-based vaccines for 2025–26, Northern Hemisphere

Viral strain	Quadrivalent
A/Victoria/4897/2022 (H1N1) pdm09-like virus	Yes
A/Croatia/10136RV/2023 (H3N2)-like virus	Yes
B/Austria/1359417/2021 (B/Victoria lineage)-like virus	Yes

### Cell-or recombinant-based vaccines for 2025–26, Northern Hemisphere

Viral strain	Quadrivalent
A/Wisconsin/67/2022 (H1N1) pdm09-like virus	Yes
A/District of Columbia/27/2023 (H3N2)-like virus	Yes
B/Austria/1359417/2021 (B/Victoria lineage)-like virus	Yes

Beginning with the 2023–24 flu season, the CDC no longer recommended additional safety measures for flu vaccination of people with egg allergies.<sup>2</sup> It should be administered in settings in which personnel and equipment are available for rapid recognition and treatment.

The following patients are at an increased risk of infections and complications from the flu:

- Pregnant women
- Children, especially those younger than 2 years old
- People 50 years and older
- People of any age with certain chronic medical conditions, including asthma, diabetes and chronic lung disease
- People of any age who have immunosuppression
- People living with or caring for those at high risk for flu complications, including:
  - Healthcare workers
  - Household contacts of people at high risk for complications from the flu
  - Household contacts and out-of-home caregivers of children younger than 6 months (i.e., children too young to be vaccinated)

To facilitate correct reimbursement, Humana Healthy Horizons needs appropriate administration, vaccine and diagnosis codes for each vaccination claim. Administration codes for influenza vaccination are 90460, 90461, 90471, 90472, 90473 and 90474. Diagnosis code Z23—encounter for immunization— must be included in any ICD-10 diagnosis code position between 2 and 9.\*

## Additional information

**Pediatric healthcare providers:** Providers should obtain the flu vaccine through the Vaccines for Children program. Humana Healthy Horizons will only reimburse for the administration claim code that is in accordance with the Medicaid fee schedule of the specific state.

**Adult healthcare providers:** Humana Healthy Horizons covers the adult flu vaccine. Humana Healthy Horizons will only reimburse for the administration code that is in accordance with the Medicaid fee schedule of the specific state.

\* ICD-10 codes are from the International Classification of Diseases, 10th Edition.

Vaccine Current Procedural Terminology (CPT®) codes	Description	States vaccine is covered in Medicaid fee schedule
90653	Influenza vaccine, inactivated (IIV), subunit, adjuvanted, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90656	Influenza virus vaccine, trivalent (IIV3), split virus, preservative-free, 0.5 mL dosage, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90657	Influenza virus vaccine, trivalent (IIV3), split virus, 0.25 mL dosage, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90658	Influenza virus vaccine, trivalent (IIV3), split virus, 0.5 mL dosage, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90660	Influenza virus vaccine, trivalent (IIV3), for intranasal use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90661	Influenza virus vaccine, trivalent (ccIIV3), derived from cell cultures, subunit, antibiotic-free, 0.5 mL dosage, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90662	Influenza virus vaccine (IIV), split virus, preservative-free, enhanced immunogenicity via increased antigen content, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90672	Influenza virus vaccine, quadrivalent, live (LAIV4), for intranasal use	IL, IN, KY, LA, OH, SC, VA

Vaccine Current Procedural Terminology (CPT®) codes	Description	States vaccine is covered in Medicaid fee schedule
90673	Influenza virus vaccine, trivalent (RIV3), derived from recombinant DNA, hemagglutinin (HA) protein only, preservative- and antibiotic-free, for intramuscular use	FL, IL, IN, KY, OH, SC
90674	Influenza virus vaccine, quadrivalent (ccIIV4), derived from cell cultures, subunit, preservative- and antibiotic-free, 0.5 mL dosage, for intramuscular use	FL, IL, IN, KY, LA, OH, OK, SC, VA
90682	Influenza virus vaccine, quadrivalent (RIV4), derived from recombinant DNA, hemagglutinin (HA) protein only, preservative- and antibiotic-free, for intramuscular use	IL, IN, KY, LA, OH, SC, VA
90685	Influenza virus vaccine, quadrivalent (IIV4), split virus, preservative-free, 0.25 mL dosage, for intramuscular use	IL, IN, KY, OH, SC, VA
90686	Influenza virus vaccine, quadrivalent (IIV4), split virus, preservative-free, 0.5 mL dosage, for intramuscular use	IL, IN, KY, LA, OH, SC, VA
90687	Influenza virus vaccine, quadrivalent (IIV4), split virus, 0.25 mL dosage, for intramuscular use	IL, IN, KY, OH, SC, VA
90688	Influenza virus vaccine, quadrivalent (IIV4), split virus, 0.5 mL dosage, for intramuscular use	IL, IN, KY, LA, OH, SC, VA
90694	Influenza virus vaccine, quadrivalent (aIIV4), inactivated, adjuvanted, preservative-free, 0.5 mL dosage, for intramuscular use	IL, IN, KY, OH, SC, VA
90756	Influenza virus vaccine, quadrivalent (ccIIV4), derived from cell cultures, subunit, antibiotic-free, 0.5 mL dosage, for intramuscular use	IL, IN, KY, LA, OH, SC, VA

If you have questions, please call Provider Services based on the specific state.
