| Exclusion Criteria           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Required Medical Information | Ankylosing Spondylitis: Diagnosis of active ankylosing spondylitis. Member has tried or cannot use a non-steroidal anti-inflammatory drug (NSAIDs) (e.g. ibuprofen, meloxicam, naproxen). Psoriatic Arthritis: Diagnosis of active psoriatic arthritis. Rheumatoid Arthritis: Diagnosis of moderately to severely active rheumatoid arthritis. Member has tried a single DMARD (e.g. methotrexate, sulfasalazine, hydroxychloroquine, leflunomide) or cannot use any DMARDs. Polyarticular Juvenile Idiopathic Arthritis: Diagnosis of moderately to severely active polyarticular juvenile idiopathic arthritis. Member has tried or cannot use a DMARD (e.g. methotrexate, cyclosporine, leflunomide). Moderate to severe Chronic Plaque Psoriasis: Diagnosis of moderate to severe chronic plaque psoriasis. The member has tried at least one conventional oral systemic treatment (e.g. methotrexate, cyclosporine), or cannot use any conventional oral systemic treatments. Oral Ulcers Associated with Behcets Disease: The member has a diagnosis of Behcets disease AND The member will be using for the treatment of oral ulcers AND has tried or cannot use two of the following: topical corticosteroid therapy (e.g. triamcinolone oral paste), azathioprine, or colchicine. |
| Age Restriction              | Must be 18 years of age for Rheumatoid Arthritis, Moderate to severe Chronic Plaque Psoriasis, Psoriatic Arthritis, Ankylosing Spondylitis, Oral Ulcers Associated with Behcets Disease. Must be two years of age or older for moderately to severely active polyarticular juvenile idiopathic arthritis and Uveitis. Must be 6 years or older for Crohns Disease. Must be 5 years of age or older for Ulcerative Colitis. Must be 12 years of age or older for Hidradenitis Suppurativa.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Exclusion Criteria           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Required Medical Information | Ankylosing Spondylitis: Diagnosis of active ankylosing spondylitis. Member has tried or cannot use a non-steroidal anti-inflammatory drug (NSAIDs) (e.g. ibuprofen, meloxicam, naproxen). Psoriatic Arthritis: Diagnosis of active psoriatic arthritis. Rheumatoid Arthritis: Diagnosis of moderately to severely active rheumatoid arthritis. Member has tried a single DMARD (e.g. methotrexate, sulfasalazine, hydroxychloroquine, leflunomide) or cannot use any DMARDs. Polyarticular Juvenile Idiopathic Arthritis: Diagnosis of moderately to severely active polyarticular juvenile idiopathic arthritis. Member has tried or cannot use a DMARD (e.g. methotrexate, cyclosporine, leflunomide). Moderate to severe Chronic Plaque Psoriasis: Diagnosis of moderate to severe chronic plaque psoriasis. The member has tried at least one conventional oral systemic treatment (e.g. methotrexate, cyclosporine), or cannot use any conventional oral systemic treatments. Oral Ulcers Associated with Behcets Disease: The member has a diagnosis of Behcets disease AND The member will be using for the treatment of oral ulcers AND has tried or cannot use two of the following: topical corticosteroid therapy (e.g. triamcinolone oral paste), azathioprine, or colchicine. |
| Age Restriction              | Must be 18 years of age for Rheumatoid Arthritis, Moderate to severe Chronic Plaque Psoriasis, Psoriatic Arthritis, Ankylosing Spondylitis, Oral Ulcers Associated with Behcets Disease. Must be two years of age or older for moderately to severely active polyarticular juvenile idiopathic arthritis and Uveitis. Must be 6 years or older for Crohns Disease. Must be 5 years of age or older for Ulcerative Colitis. Must be 12 years of age or older for Hidradenitis Suppurativa.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Prescriber Restriction       | Licensed Practitioner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Exclusion Criteria           | Member experiences disease progression on Ayvakit (avapritinib). [Applicable to all indications except Gastrointestinal stromal tumor (GIST)]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | Gastrointestinal Stromal tumor. The member has documented PDGFRA exon 18 mutation-positive unresectable or metastatic gastrointestinal stromal tumor (including PDGFRA D842V) AND Ayvakit (avapritinib) will be given as monotherapy. Advanced systemic mastocytosis: The member has a diagnosis of advanced systemic mastocytosis (AdvSM), including systemic mastocytosis with an associated hematological neoplasm and mast cell leukemia AND Ayvakit is not recommended for the treatment of members with AdvSM with platelet counts of less than $50 \times 10^9 /L$ AND Ayvakit (avapritinib) is administered as monotherapy. Indolent Systemic Mastocytosis (ISM). The member has a diagnosis of Indolent Systemic Mastocytosis (ISM) AND is not recommended for treatment of members with documented platelet counts of less than $50 \times 10^9 /L$ AND Ayvakit (avapritinib) is administered as monotherapy. |

| Exclusion Criteria           | Hepatocellular carcinoma, Renal cell carcinoma, and Thyroid cancer: Member experiences disease progression on cabozantinib.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Required Medical Information | Renal cell carcinoma: The member has advanced renal cell carcinoma AND one of the following applies: the member will be using Cabometyx (cabozantinib) as monotherapy OR the member will be using Cabometyx (cabozantinib) in combination with a nivolumab product (Opdivo or Opdivo Qvantig) as first line therapy. Hepatocellular carcinoma. The member has a diagnosis of hepatocellular carcinoma AND The member has been previously treated with a first line therapy (e.g., sorafenib) AND Cabometyx (cabozantinib) will be given as monotherapy. Thyroid Cancer: The member has a diagnosis of locally advanced or metastatic differentiated thyroid cancer AND Member has experienced disease progression following prior anti-VEGF targeted therapy AND The disease no longer responds to radioactive iodine treatment (if radioactive iodine is appropriate) AND Cabometyx (cabozantinib) will be administered as monotherapy. Neuroendocrine Tumors (NETs): The member has a diagnosis of unresectable, locally advanced, or metastatic, well-differentiated neuroendocrine tumor (i.e., pNET and epNET). |
| Age Restriction              | Thyroid Cancer and Neuroendocrine Tumors (NETs): Member is 12 years of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Exclusion Criteria           | Members that have experienced disease progression while on Cyramza (ramucirumab).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Required Medical Information | <p>Gastric Cancer: member has a diagnosis of advanced or metastatic gastric cancer or gastro-esophageal adenocarcinoma AND the member has disease progression or intolerance on or after prior therapy with platinum-based or fluoropyrimidine-based chemotherapy AND Cyramza (ramucirumab) will be used as subsequent therapy AND will be used as monotherapy or in combination with paclitaxel. Non-Small Cell Lung Cancer: The member has a diagnosis of metastatic non-small cell lung cancer AND The member has disease progression or intolerance on or after prior therapy with platinum-based chemotherapy AND For members with EGFR (epidermal growth factor receptor) or ALK (anaplastic lymphoma kinase) genomic aberrations: the member has disease progression on FDA-approved therapy for these aberrations and Cyramza will be used in combination with Docetaxel OR member has documented epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) mutations AND Cyramza (ramucirumab) is given in combo with erlotinib as first line therapy. Colorectal Cancer: The member has a diagnosis of unresectable or metastatic colorectal cancer AND Cyramza (ramucirumab) will be given as primary treatment in combination with irinotecan or FOLFIRI (fluorouracil, leucovorin calcium, and irinotecan) for unresectable metachronous metastases and previous treatment with FOLFOX (fluorouracil, leucovorin calcium, and oxaliplatin) or CapeOX (capecitabine, oxaliplatin) as adjuvant therapy has been given OR The member has disease progression on or after prior therapy with a bevacizumab product, oxaliplatin, and a fluoropyrimidine (e.g. 5-fluorouracil, capecitabine) AND Cyramza is given in combination with FOLFIRI (irinotecan, folinic acid, and 5-fluorouracil) or irinotecan as therapy after first progression of disease if irinotecan was not previously given.</p> |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Exclusion Criteria           | Disease progression while taking daratumumab. Members who have NYHA Class IIIB or Class IV cardiac disease or Mayo Stage IIIB (Applicable to Light chain (AL) amyloidosis indication only).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Required Medical Information | Multiple Myeloma: The member has a diagnosis of multiple myeloma AND The member will be using Darzalex (daratumumab) Faspro for newly diagnosed disease in one of the following scenarios AND the member is ineligible for autologous stem cell transplant AND the member will be using Darzalex Faspro in combination with bortezomib, melphalan, and prednisone OR the member will be using Darzalex Faspro in combination with lenalidomide and dexamethasone OR the member will be using Darzalex Faspro in combination with bortezomib, lenalidomide, and dexamethasone OR the member is eligible for autologous stem cell transplant AND the member will be using in combination with bortezomib, thalidomide, and dexamethasone OR the member will be using in combination with bortezomib, lenalidomide, and dexamethasone OR the member will be using Darzalex Faspro for relapsed or progressive disease in one of the following scenarios: in combination with Velcade (bortezomib) and dexamethasone OR in combination with Kyprolis (carfilzomib) and dexamethasone OR in combination with Revlimid (lenalidomide) and dexamethasone OR in combination with Pomalyst (pomalidomide) and dexamethasone OR as monotherapy and one of the following applies: The member has received at least three prior lines of therapy, which must have included a proteasome inhibitor (e.g. bortezomib or carfilzomib) and an immunomodulatory drug (e.g. thalidomide, lenalidomide, or pomalidomide) OR The member is double-refractory to a proteasome inhibitor (e.g. bortezomib or carfilzomib) and an immunomodulatory drug (e.g. thalidomide, lenalidomide, or pomalidomide). Omission of corticosteroid from regimen is allowed if intolerance/contraindication. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Exclusion Criteria           | Members that have experienced disease progression while on dasatinib. For ALL and CML: The member has one of the following mutations: T315I/A, F317L/V/I/C or V299L.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | Chronic Myelogenous Leukemia (CML): The member has a diagnosis of Ph+ chronic myeloid leukemia (CML) and one of the following applies: The member has accelerated or blast phase CML OR The member has a diagnosis of chronic phase CML that has not been previously treated and one of the following applies: Intermediate- or high-risk score for disease progression OR Low risk score for disease progression and has contraindication to, intolerance to, or unable to achieve treatment goals with imatinib OR The member has a diagnosis of chronic phase CML that has received previous treatment. Acute Lymphoblastic Leukemia (ALL): The member has ALL (Philadelphia Chromosome positive) and dasatinib is being used for induction or consolidation treatment in combination with chemotherapy or corticosteroids OR treatment is for maintenance therapy or the treatment of members with resistance or intolerance to prior therapy. Advanced Gastrointestinal Stromal Tumor (GIST): The member has a diagnosis of advanced unresectable GIST. The member has progressive disease or is intolerant to prior therapy with imatinib or sunitinib or Stivarga (regorafenib). [Pediatric] Chronic Myelogenous Leukemia (CML). The member has a diagnosis of chronic myeloid leukemia (CML) that is Philadelphia chromosome positive (Ph+) AND the member is in chronic phase. [Pediatric] Acute lymphoblastic leukemia (ALL). The member has a diagnosis of acute lymphoblastic leukemia (ALL) AND the member has Philadelphia chromosome positive (Ph+) disease AND the member has newly-diagnosed disease AND The member will be using dasatinib in combination with chemotherapy. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Exclusion Criteria           | Platelet counts less than 50,000/mcL. (Per FDA label, Deferasirox is contraindicated in patients with platelets below 50,000).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Required Medical Information | Chronic Iron Toxicity (hemosiderosis) Secondary to Transfusional Iron Overload. (Initial Request): The member must meet ALL of the following criteria: Diagnosis of chronic iron overload (hemosiderosis) secondary to multiple RBC transfusions AND Ferritin level is consistently greater than 1000mcg/L. (Continuation of Therapy): The member must meet ALL of the following criteria: Ferritin level remains consistently at or above 500mcg/L while taking deferasirox therapy. Chronic iron overload in patients with non-transfusion dependent thalassemia (NTDT) syndromes: The member must meet ALL of the following criteria: Has a diagnosis of chronic iron overload with non-transfusion dependent thalassemia (NTDT) syndromes AND Has a liver iron (Fe) concentration of at least 5mg Fe/gram of liver dry weight AND Has a serum ferritin greater than 300 mcg/L. (Continuation of Therapy): The member must meet ALL of the following criteria: Has a liver iron (Fe) concentration of at least 3 mg/gram of liver dry weight AND has a serum ferritin greater than or equal to 300 mcg/L. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Other Criteria      | <p>Moderate-to-severe asthma with an eosinophilic phenotypic or with oral corticosteroid dependent asthma: The member has a diagnosis of moderate-to-severe asthma AND The member has an eosinophilic phenotype, defined by an elevated peripheral blood eosinophil level of: greater than or equal to 150 cells/uL at therapy initiation, OR greater than or equal to 300 cells/uL within 12 months prior to therapy initiation, OR The member has oral corticosteroid-dependent asthma AND The member has been unable to achieve adequate control of asthma while on maximum tolerated inhaled corticosteroid therapy in combination with a long acting beta agonist (eg formoterol). Chronic Rhinosinusitis with Nasal Polyposis: The member must have a diagnosis of Chronic Rhinosinusitis with Nasal Polyposis AND Dupixent (dupilumab) will be used in conjunction with a daily intranasal corticosteroid spray AND The member has been unable to achieve adequate control of symptoms with maximum tolerated intranasal corticosteroid therapy. Prurigo Nodularis: member must meet all of the following criteria: diagnosis of Prurigo Nodularis Chronic Obstructive Pulmonary Disease (COPD) with an eosinophilic phenotype: The member has a diagnosis of Chronic Obstructive Pulmonary Disease (COPD) AND The member has an eosinophilic phenotype defined as an elevated peripheral blood eosinophil level of greater than or equal to 300 cells/uL within 12 months prior to therapy initiation AND The member has been unable to achieve adequate control of COPD while on an: Inhaled corticosteroid therapy in combination with a long-acting beta agonist (LABA) and long-acting muscarinic antagonist (LAMA) OR LABA-LAMA therapy if inhaled corticosteroids are contraindicated. Bullous Pemphigoid: The member has a diagnosis of bullous pemphigoid confirmed by biopsy or serologic tests AND Prescribed by or in consultation with a dermatologist, allergist, or immunologist AND member has had previous treatment with, intolerance or contraindication to one high potency topical corticosteroid (e.g. augmented betamethasone dipropionate 0.05%, clobetasol cream/ointment 0.05%, triamcinolone acetonide 0.5%) OR oral corticosteroid (e.g. prednisone). Allergic Fungal Rhinosinusitis (AFRS): Member has a diagnosis of allergic fungal rhinosinusitis (AFRS) AND Member has a history of sino-nasal surgery.</p> |

## DUPIXENT SYRINGE - SYRINGE (ML)

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other Criteria      | <p>Moderate-to-severe asthma with an eosinophilic phenotypic or with oral corticosteroid dependent asthma: The member has a diagnosis of moderate-to-severe asthma AND The member has an eosinophilic phenotype, defined by an elevated peripheral blood eosinophil level of: greater than or equal to 150 cells/uL at therapy initiation, OR greater than or equal to 300 cells/uL within 12 months prior to therapy initiation, OR The member has oral corticosteroid-dependent asthma AND The member has been unable to achieve adequate control of asthma while on maximum tolerated inhaled corticosteroid therapy in combination with a long acting beta agonist (eg formoterol). Chronic Rhinosinusitis with Nasal Polyposis: The member must have a diagnosis of Chronic Rhinosinusitis with Nasal Polyposis AND Dupixent (dupilumab) will be used in conjunction with a daily intranasal corticosteroid spray AND The member has been unable to achieve adequate control of symptoms with maximum tolerated intranasal corticosteroid therapy. Prurigo Nodularis: member must meet all of the following criteria: diagnosis of Prurigo Nodularis Chronic Obstructive Pulmonary Disease (COPD) with an eosinophilic phenotype: The member has a diagnosis of Chronic Obstructive Pulmonary Disease (COPD) AND The member has an eosinophilic phenotype defined as an elevated peripheral blood eosinophil level of greater than or equal to 300 cells/uL within 12 months prior to therapy initiation AND The member has been unable to achieve adequate control of COPD while on an: Inhaled corticosteroid therapy in combination with a long-acting beta agonist (LABA) and long-acting muscarinic antagonist (LAMA) OR LABA-LAMA therapy if inhaled corticosteroids are contraindicated. Bullous Pemphigoid: The member has a diagnosis of bullous pemphigoid confirmed by biopsy or serologic tests AND Prescribed by or in consultation with a dermatologist, allergist, or immunologist AND member has had previous treatment with, intolerance or contraindication to one high potency topical corticosteroid (e.g. augmented betamethasone dipropionate 0.05%, clobetasol cream/ointment 0.05%, triamcinolone acetonide 0.5%) OR oral corticosteroid (e.g. prednisone). Allergic Fungal Rhinosinusitis (AFRS): Member has a diagnosis of allergic fungal rhinosinusitis (AFRS) AND Member has a history of sino-nasal surgery.</p> |
| Part B Prerequisite | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Exclusion Criteria           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | Migraine Prophylaxis: Member is using for prophylaxis of migraine headache AND has had previous treatment with or intolerance to immediate release topiramate tablet or capsule AND has had previous treatment, intolerance, or contraindication with one of the following: a serotonin and norepinephrine reuptake inhibitor or a tricyclic antidepressant. Epilepsy Adjunctive Therapy: Member has a diagnosis of partial-onset (focal) seizures, primary generalized tonic-clonic seizures, or seizures associated with Lennox-Gastaut syndrome (LGS) AND Member will use Eprontia (topiramate) in combination with at least one other drug for controlling seizures AND Member has tried or cannot use immediate-release topiramate tablet or capsule. Epilepsy Monotherapy: Member has a diagnosis of partial-onset (focal) seizures or primary generalized tonic-clonic seizures AND Member has tried or cannot use immediate release topiramate tablet or capsule. |
| Age Restriction              | Migraine Prophylaxis: Member must be 12 years of age or older. Epilepsy indications: Member must be 2 years of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Exclusion Criteria           | Members with colorectal cancer (CRC) in which RAS mutation status is unknown [Applies to Colorectal Cancer [Wild-Type RAS; Wild-Type KRAS/NRAS]and Colorectal Cancer [KRAS G12C-mutated]. Member has had disease progression on Vectibix or Erbitux. [All Indications]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Required Medical Information | Colorectal Cancer [Wild-Type RAS; Wild-Type KRAS/NRAS]. The member has a diagnosis of advanced or metastatic colorectal cancer (mCRC) AND The member has colorectal cancer that is documented as wild-type, non-mutated KRAS and NRAS [wild-type RAS] AND Erbitux (cetuximab) will be used as one of the following: as monotherapy in members intolerant to irinotecan or who have experienced disease progression following therapy with both irinotecan and oxaliplatin based therapy OR in combination with irinotecan-based therapy OR in combination with fluorouracil based therapy (CAPEOX, FOLFOX, FOLFIRI). Head and Neck Cancer. The member has a diagnosis of locally or regionally advanced squamous cell head and neck cancer with concomitant XRT (radiation) OR The member has recurrent (including locoregional), unresectable, or metastatic squamous cell head and neck cancer and one of the following applies: Erbitux (cetuximab) will be given as monotherapy or Erbitux (cetuximab) will be given in conjunction with a platinum agent OR Erbitux (cetuximab) will be given in combination with platinum-based therapy with 5-FU (fluorouracil). Colorectal Cancer [BRAF V600E-mutated]: The member has documented BRAF V600E metastatic colorectal cancer (mCRC) AND One of the following scenarios applies: The member has documented BRAF V600E metastatic colorectal cancer and progressive disease on prior therapy and Erbitux (cetuximab) will be given in combination with Braftovi (encorafenib) OR The member has documented BRAF V600E metastatic colorectal cancer and Erbitux (cetuximab) will be given in combination with Braftovi (encorafenib) and FOLFOX (fluorouracil, leucovorin, and oxaliplatin) regimen. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Exclusion Criteria           | Members that have experienced disease progression while on everolimus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Required Medical Information | Advanced Renal Cell Carcinoma (RCC). The member has a diagnosis of advanced /metastatic renal cell carcinoma (stage IV). Subependymal Giant Cell Astrocytoma (SEGA) with TSC [Adults and Pediatrics]. The member has a diagnosis of Subependymal Giant Cell Astrocytoma (SEGA) associated with tuberous sclerosis complex AND The member requires therapeutic intervention but is not a candidate for curative surgical resection. Neuroendocrine Tumors: The member has disease that is unresectable, locally advanced or metastatic and one of the following applies: The member has a diagnosis of progressive neuroendocrine tumors of pancreatic origin (PNET) OR The member has a diagnosis of progressive, well differentiated, non-functional neuroendocrine tumors of gastrointestinal or lung. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Prescriber Restriction       | Licensed Practitioner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Coverage Duration            | Plan year duration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Other Criteria               | Angiomyolipoma and Tuberous Sclerosis Complex (TSC). The member has a diagnosis of renal angiomyolipoma and tuberous sclerosis complex AND Immediate surgery is not required. Metastatic Breast Cancer. The member has a diagnosis of hormone receptor (HR) positive and human epidermal growth factor receptor 2 (HER2) negative advanced or metastatic disease AND the member has been treated with endocrine therapy (e.g. letrozole, anastrozole) AND The member will use Everolimus in combination with exemestane or fulvestrant. Tuberous sclerosis complex (TSC)- associated partial onset seizures [Adults and Pediatrics]: The member has diagnosis of TSC- associated partial onset seizures AND Everolimus tablets for oral suspension is being used as adjunctive therapy.                  |
| Part B Prerequisite          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## EXXUA - TABLET, EXTENDED RELEASE 24 HR

| PA Criteria                  | Criteria Details                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Exclusion Criteria           | Prolonged QTc interval greater than 450 msec at baseline. Congenital long QT syndrome. Severe hepatic impairment.                                                                                                                                                                                                                                                                                                       |
| Required Medical Information | Major Depressive Disorder: The member must be utilizing Exxua (gepirone) for the treatment of major depressive disorder (MDD) AND The member has had prior therapy, contraindication, or intolerance to any two antidepressants from any of the following categories: generic SSRI (e.g., citalopram, fluoxetine, paroxetine, or sertraline), generic SNRI (e.g., venlafaxine or duloxetine), bupropion OR mirtazapine. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Exclusion Criteria           | Patients that have experienced disease progression while on imatinib.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Required Medical Information | One of the following applies: The member has a diagnosis of Ph+ CML that is newly diagnosed in the chronic phase OR The member has a diagnosis of Ph+ CML that is in accelerated phase or blast crisis OR The member has a diagnosis of Ph+ CML that is in chronic phase after failure of interferon-alpha therapy. Acute lymphoid leukemia (ALL). The member has a diagnosis of Ph+ ALL that is relapsed, refractory, or newly diagnosed and imatinib is being added to consolidation or induction therapy OR the member has a diagnosis of PH+ALL and receiving maintenance therapy. The member has a diagnosis of Kit (CD117)-positive GIST. The member has a diagnosis of Dermatofibrosarcoma protuberans (DFSP) that is adjuvant (positive surgical margins following excision) unresectable, recurrent, and/or metastatic. The member has a diagnosis of chronic eosinophilic leukemia or hypereosinophilic syndrome. The member has a diagnosis of MDS or chronic MPD that is associated with platelet-derived growth factor receptor (PDGFR) gene rearrangement.(ex. Chronic myelomonocyte leukemia, atypical chronic myeloid leukemia, juvenile myelomonocyte leukemia).The member has a diagnosis of aggressive systemic mastocytosis. The member must not harbor the D816v mutation of C-kit. Melanoma. The member has a diagnosis of unresectable melanoma with activating mutation of C-kit. Imatinib will be used as single agent in subsequent therapy. |
| Age Restriction              | [Pediatric] Chronic myeloid leukemia (CML) and [Pediatric] Acute Lymphoid Leukemia (ALL)- The member is at least one year of age.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Exclusion Criteria           | All indications except Bladder Cancer and GE/GEJC: Disease progression while on or following anti-PD-1/PD-L1 therapy [e.g., Opdivo (nivolumab), Keytruda (pembrolizumab), Tecentriq (atezolizumab), Imfinzi (durvalumab)]. For unresectable stage III NSCLC, member has not exceeded a maximum of twelve (12) months of therapy. For perioperative NSCLC, for adjuvant treatment, and GE/GEJC member has not exceeded a maximum of 12 cycles after surgery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | Non-Small Cell Lung Cancer (NSCLC) (unresectable): Member has diagnosis of unresectable stage III non-small cell lung cancer (NSCLC) AND Imfinzi (durvalumab) will be used as consolidation therapy AND Member has not experienced disease progression following completion of concurrent platinum-based chemotherapy and radiation AND Imfinzi (durvalumab) will be used as monotherapy. Non-Small Cell Lung Cancer (NSCLC) (metastatic): Member has a diagnosis of metastatic non-small cell lung cancer (NSCLC) AND Member has no documented EGFR or ALK genomic tumor aberrations AND Member will be using Imfinzi (durvalumab) in combination with Imjudo (tremelimumab-actl) and platinum-based chemotherapy as first-line therapy. Small Cell Lung Cancer: The member has a diagnosis of extensive-stage small cell lung cancer AND Imfinzi (durvalumab) will be given in combination with etoposide and carboplatin as first line therapy followed by maintenance therapy with Imfinzi (durvalumab) as a single agent. Biliary Tract Cancer: the member has a diagnosis of locally advanced or metastatic biliary tract cancer AND the member will be using Imfinzi (durvalumab) in combination with gemcitabine and cisplatin. Hepatocellular Carcinoma: The member has a diagnosis of locally advanced unresectable and/or metastatic hepatocellular carcinoma AND The member will be using Imfinzi (durvalumab) in combination with Imjudo (tremelimumab-actl) as first-line therapy only. Endometrial cancer: The member has a diagnosis of primary advanced or recurrent endometrial cancer AND the disease is mismatch repair deficient (dMMR) AND Imfinzi (durvalumab) will be used in combination with carboplatin and paclitaxel followed by Imfinzi (durvalumab) as a single agent. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## IMFINZI - VIAL (ML)

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other Criteria         | <p>Non-small cell lung cancer (perioperative): The member has a diagnosis of non-small cell lung cancer AND The disease is resectable (tumors greater than or equal to 4 cm and/or node positive) AND The disease does not have known epidermal growth factor receptor (EGFR) mutations or anaplastic lymphoma kinase (ALK) rearrangements AND Imfinzi (durvalumab) will be used in combination with chemotherapy as neoadjuvant treatment followed by Imfinzi (durvalumab) as monotherapy as adjuvant treatment after surgery. Small Cell Lung Cancer (Limited stage): The member has a diagnosis of limited-stage small cell lung cancer AND The member's disease has not progressed following concurrent platinum-based chemotherapy and radiation therapy AND Imfinzi (durvalumab) will be given as monotherapy. Bladder Cancer (muscle invasive): The member has a diagnosis of muscle invasive bladder cancer (MIBC) AND The member will be using Imfinzi (durvalumab) in combination with gemcitabine and cisplatin as neoadjuvant treatment, followed by a single agent Imfinzi (durvalumab) as adjuvant treatment following radical cystectomy. Gastric or gastroesophageal junction adenocarcinoma (GE/GEJC): The member has a diagnosis of resectable gastric or gastroesophageal junction adenocarcinoma AND Imfinzi (durvalumab) will be used in combination with fluorouracil, leucovorin, oxaliplatin and docetaxel (FLOT) as neoadjuvant and adjuvant treatment, followed by Imfinzi (durvalumab) monotherapy as part of remaining adjuvant treatment. Bladder Cancer (non-muscle invasive): The member has a diagnosis of high-risk non-muscle invasive bladder cancer (High risk criteria may include one of the following: T1 tumor, grade 3/high grade tumor, carcinoma in situ or multiple and recurrent and large tumors.) AND Imfinzi (durvalumab) will be used in combination with Bacillus Calmette-Guerin (BCG) vaccine AND The member is BCG naive defined as no prior intravesical BCG vaccine or greater than 2 years since last exposure.</p> |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Exclusion Criteria           | Patients that have experienced disease progression while on imatinib.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Required Medical Information | One of the following applies: The member has a diagnosis of Ph+ CML that is newly diagnosed in the chronic phase OR The member has a diagnosis of Ph+ CML that is in accelerated phase or blast crisis OR The member has a diagnosis of Ph+ CML that is in chronic phase after failure of interferon-alpha therapy. Acute lymphoid leukemia (ALL). The member has a diagnosis of Ph+ ALL that is relapsed, refractory, or newly diagnosed and imatinib is being added to consolidation or induction therapy OR the member has a diagnosis of PH+ALL and receiving maintenance therapy. The member has a diagnosis of Kit (CD117)-positive GIST. The member has a diagnosis of Dermatofibrosarcoma protuberans (DFSP) that is adjuvant (positive surgical margins following excision) unresectable, recurrent, and/or metastatic. The member has a diagnosis of chronic eosinophilic leukemia or hypereosinophilic syndrome. The member has a diagnosis of MDS or chronic MPD that is associated with platelet-derived growth factor receptor (PDGFR) gene rearrangement.(ex. Chronic myelomonocyte leukemia, atypical chronic myeloid leukemia, juvenile myelomonocyte leukemia).The member has a diagnosis of aggressive systemic mastocytosis. The member must not harbor the D816v mutation of C-kit. Melanoma. The member has a diagnosis of unresectable melanoma with activating mutation of C-kit. Imatinib will be used as single agent in subsequent therapy. |
| Age Restriction              | [Pediatric] Chronic myeloid leukemia (CML) and [Pediatric] Acute Lymphoid Leukemia (ALL) - The member is at least one year of age.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Exclusion Criteria           | Disease progression while on or following prior anti-PD-1/PD-L1 therapy (e.g., nivolumab, atezolizumab) (applicable to all indications except Head and Neck Squamous Cell Carcinoma perioperative). Member requiring urgent cytoreductive therapy (applicable to PMBCL only). Member not to exceed one year of total adjuvant treatment (applicable to melanoma, NSCLC, and renal cell carcinoma only). Total treatment duration of Keytruda (pembrolizumab) is more than 12 months (Head and Neck Squamous Cell Carcinoma perioperative only).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Required Medical Information | Melanoma: unresectable or metastatic melanoma OR melanoma OR stage IIB, IIC, or III melanoma AND as monotherapy for adjuvant treatment after complete resection with involvement of lymph node(s). NSCLC-1st Line: metastatic NSCLC AND 1 of the following applies: disease with PD-L1 expression [TPS greater than or equal to 1%] with no EGFR or ALK genomic tumor aberrations and as 1st line AND tumor expresses PD-L1 as determined by an FDA-approved test AND used as monotherapy OR nonsquamous histology with no EGFR or ALK genomic tumor aberrations and in combo with pemetrexed and carboplatin or cisplatin as 1st line therapy followed by Keytruda maintenance in combo with pemetrexed OR squamous histology and used in combo with carboplatin and paclitaxel or Abraxane as 1st line followed by Keytruda maintenance OR stage III NSCLC and not candidate for surgical resection or definitive chemoradiation AND PD-L1 expression with no EGFR or ALK genomic tumor aberrations and as 1st line AND Tumor expresses PD-L1 as determined by an FDA-approved test AND as monotherapy. NSCLC-Subsequent: metastatic NSCLC AND progression on or following chemo and EGFR inhibitor, if EGFR mutation positive or ALK inhibitor, if ALK positive AND Tumor expresses PD-L1 as determined by an FDA-approved test AND as monotherapy. Head-Neck Cancer: recurrent or metastatic non-nasopharyngeal head and neck squamous cell carcinoma AND 1 of following: disease progression on platinum-containing chemo and as monotherapy OR in combo with platinum and 5-FU for 1st line treatment OR monotherapy in 1st line and disease expresses CPS score greater than or equal to 1 as detected by an FDA-approved test. Hodgkin's Lymphoma-Adult: as monotherapy for refractory or relapsed disease. Hodgkin's Lymphoma-Peds: monotherapy and 1 of following: Refractory disease OR Relapsed after 2 or more lines of prior therapy. CSCC: recurrent or metastatic CSCC AND disease is not amenable to curative surgery or radiation AND used as a monotherapy. |
| Age Restriction              | Stage IIB, IIC, or III melanoma - member is 12 years of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Exclusion Criteria           | Disease progression while on or following prior anti-PD-1/PD-L1 therapy (e.g., nivolumab, atezolizumab) (applicable to all indications except Head and Neck Squamous Cell Carcinoma perioperative). Member not to exceed one year of total adjuvant treatment (applicable to melanoma, NSCLC, and renal cell carcinoma only). Total treatment duration of Keytruda (pembrolizumab) is more than 12 months (Head and Neck Squamous Cell Carcinoma perioperative only).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Required Medical Information | Melanoma: unresectable or metastatic melanoma OR melanoma OR stage IIB, IIC, or III melanoma AND as monotherapy for adjuvant treatment after complete resection with involvement of lymph node(s). NSCLC-1st Line: metastatic NSCLC AND 1 of the following applies: disease with PD-L1 expression [TPS greater than or equal to 1%] with no EGFR or ALK genomic tumor aberrations and as 1st line AND tumor expresses PD-L1 as determined by an FDA-approved test AND used as monotherapy OR nonsquamous histology with no EGFR or ALK genomic tumor aberrations and in combo with pemetrexed and carboplatin or cisplatin as 1st line therapy followed by pembrolizumab product maintenance in combo with pemetrexed OR squamous histology and used in combo with carboplatin and paclitaxel or Abraxane as 1st line followed by pembrolizumab product maintenance OR stage III NSCLC and not candidate for surgical resection or definitive chemoradiation AND PD-L1 expression with no EGFR or ALK genomic tumor aberrations and as 1st line AND Tumor expresses PD-L1 as determined by an FDA-approved test AND as monotherapy. NSCLC-Subsequent: metastatic NSCLC AND progression on or following chemo and EGFR inhibitor, if EGFR mutation positive or ALK inhibitor, if ALK positive AND Tumor expresses PD-L1 as determined by an FDA-approved test AND as monotherapy. Head-Neck Cancer: recurrent or metastatic non-nasopharyngeal head and neck squamous cell carcinoma AND 1 of following: disease progression on platinum-containing chemo and as monotherapy OR in combo with platinum and 5-FU for 1st line treatment OR monotherapy in 1st line and disease expresses CPS score greater than or equal to 1 as detected by an FDA-approved test. CSCC: recurrent or metastatic CSCC AND disease is not amenable to curative surgery or radiation AND used as a monotherapy. |
| Age Restriction              | Stage IIB, IIC, or III melanoma - member is 12 years of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Exclusion Criteria           | Early Breast Cancer - Combination with Aromatase Inhibitor: Member exceeds three years of total Kisqali (ribociclib) based treatment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Required Medical Information | Breast Cancer-Combination with Aromatase Inhibitors. The member has a diagnosis of advanced or metastatic hormone receptor (HR)-positive and human epidermal growth factor receptor 2 (Her2neu)-negative breast cancer AND the member will be using Kisqali (ribociclib) in combination with an aromatase inhibitor (e.g., letrozole) as first line endocrine therapy. Breast Cancer- Combination with fulvestrant. The member has a diagnosis of advanced or metastatic hormone receptor-positive and human epidermal growth factor receptor 2-negative breast cancer AND the member will be using Kisqali (ribociclib) in combination with fulvestrant. Early Breast Cancer-Combination with Aromatase Inhibitor: The member has a diagnosis of hormone receptor (HR) - positive and human epidermal growth factor receptor 2 (HER2) - negative, stage II or III early breast cancer at high risk of recurrence AND the member will be using Kisqali (ribociclib) in combination with an aromatase inhibitor (e.g., letrozole) as adjuvant treatment. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Exclusion Criteria           | Members with pernicious anemia or megaloblastic anemia secondary to the lack of vitamin B12.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Required Medical Information | Osteosarcoma: The member is being treated with high dose methotrexate for osteosarcoma. The patient has been treated with leucovorin calcium and has experienced documented side effects either due to lack of leucovorin calcium efficacy OR due to leucovorin calcium formulation necessitating a change in therapy. Impaired methotrexate elimination or inadvertent over dosage of folic acid antagonists. The patient has been treated with methotrexate or other folic acid antagonist and is currently exhibiting signs of toxicity likely due to aforementioned therapy. The patient has been treated with leucovorin calcium and has experienced documented side effects either due to lack of leucovorin calcium efficacy or due to leucovorin calcium formulation necessitating a change in therapy. Advanced Metastatic Colorectal Cancer. The member has advanced metastatic colorectal cancer. The member is receiving palliative treatment with combination chemotherapy with 5-fluorouracil AND The member has been treated with leucovorin calcium and has experienced documented side effects either due to lack of leucovorin calcium efficacy or has experienced documented side effects due to leucovorin calcium formulation necessitating a change in therapy. |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Exclusion Criteria           | Cutaneous squamous cell carcinoma, Basal cell carcinoma (BCC), and Non-small cell lung cancer (NSCLC): Member has experienced disease progression on or after prior PD-1/PD-L1 inhibitor (e.g., Keytruda).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Required Medical Information | Cutaneous squamous cell carcinoma. The member has a diagnosis of locally advanced or metastatic cutaneous squamous cell carcinoma (CSCC) AND the disease is not amenable to curative surgery or radiation AND Libtayo (cemiplimab-rwlc) is being used as a monotherapy. Cutaneous squamous cell carcinoma (adjuvant): The member has a diagnosis of cutaneous squamous cell carcinoma at high risk of recurrence AND Libtayo (cemiplimab-rwlc) will be used as monotherapy after surgery and radiation. Basal cell carcinoma (BCC): The member has locally advanced BCC or metastatic BCC AND the disease has been treated with prior hedgehog pathway inhibitor OR treatment with a hedgehog pathway inhibitor is inappropriate AND Libtayo (cemiplimab-rwlc) is given monotherapy. Non-small cell lung cancer (NSCLC): The member has a diagnosis of NSCLC without tumor aberrations (e.g., EGFR, ALK, ROS-1) AND The disease is locally advanced (not amenable to surgery or definitive chemoradiation) or metastatic AND The tumor expresses documented high PD-L1 expression [Tumor Proportion Score (TPS) greater than or equal to 50%] AND Libtayo (cemiplimab-rwlc) is given as monotherapy OR Libtayo (cemiplimab-rwlc) is given in combination with platinum based chemotherapy as first line therapy. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Required Medical Information | Non-small cell lung cancer [ALK-Positive]. The member has a diagnosis of recurrent, advanced, or metastatic non-small cell lung cancer (NSCLC) AND The disease is documented as anaplastic lymphoma kinase (ALK) positive AND Lorbrena (lorlatinib) will be given as a single agent AND Lorbrena (lorlatinib) will be given in the metastatic setting: as first line therapy OR as subsequent therapy after disease progression with a previous ALK inhibitor (e.g., alectinib, brigatinib). Non- small cell lung cancer [ROS1-Positive]: The member has a diagnosis of recurrent, advanced, or metastatic NSCLC AND The disease is documented as ROS1-positive AND Lorbrena (lorlatinib) will be given as subsequent therapy after disease progression with a previous ROS1 inhibitor [e.g., Augtyro (repotrectinib), Ibtrozi (taletrectinib), Rozlytrek (entrectinib), or Xalkori (crizotinib)] AND Lorbrena (lorlatinib) will be given as a single agent. |

| Exclusion Criteria | <p>Melanoma - Unresectable or metastatic: Members on concomitant Yervoy (ipilimumab), Zelboraf (vemurafenib), Opdivo (nivolumab), Cotellic (cobimetinib), Braftovi (encorafenib), or Mektovi (binimetinib). Members that have experienced disease progression while on Mekinist (trametinib). Members that have experienced disease progression while on prior anti-BRAF/MEK combination therapy [e.g. Cotellic (cobimetinib) with Zelboraf (vemurafenib) or Braftovi (encorafenib) with Mektovi (binimetinib)]. Non-small cell lung cancer, Anaplastic Thyroid Cancer and Metastatic Solid Tumors: Members on concomitant Yervoy (ipilimumab), Zelboraf (vemurafenib), Opdivo (nivolumab), Keytruda (pembrolizumab), Cotellic (cobimetinib), Braftovi (encorafenib), or Mektovi (binimetinib). Members that have experienced disease progression while on prior anti-BRAF/MEK combination therapy [e.g. Cotellic (cobimetinib) with Zelboraf (vemurafenib) or Braftovi (encorafenib) with Mektovi (binimetinib)]. Adjuvant melanoma: member is taking Mekinist (trametinib) total treatment for more than one year. Members on concomitant Yervoy (ipilimumab), Zelboraf (vemurafenib), Opdivo (nivolumab), Keytruda (pembrolizumab), Cotellic (cobimetinib), Braftovi (encorafenib), or Mektovi (binimetinib). Members that have experienced disease progression while on prior anti-BRAF/MEK combination therapy [e.g. Cotellic (cobimetinib) with Zelboraf (vemurafenib) or Braftovi (encorafenib) with Mektovi (binimetinib)]. Low-grade Glioma: Members that have experienced disease progression while on Mekinist (trametinib). Members that have experienced disease progression while on prior anti-BRAF/MEK combination therapy [e.g. Cotellic (cobimetinib) with Zelboraf (vemurafenib) or Braftovi (encorafenib) with Mektovi (binimetinib)].</p> |

## MEKINIST - TABLET

|                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Required Medical Information</b> | <p>Melanoma - Unresectable or Metastatic: The member has a diagnosis of unresectable or stage IV metastatic melanoma AND The member has a documented BRAF V600 activating mutation AND The member will be using Mekinist as a single-agent (member has not received prior BRAF-inhibitor therapy) OR in combination with Tafenlar (dabrafenib). Non-small cell lung cancer: The member has a diagnosis of recurrent or metastatic non-small cell lung cancer(NSCLC) AND The member has a documented BRAF V600E mutation AND The member will be using Mekinist (trametinib) in combination with Tafenlar (dabrafenib).</p> <p>Melanoma - Adjuvant. The member has a diagnosis of stage III melanoma AND The member has undergone lymph node resection of involved lymph nodes AND The member has a documented BRAF V600 activating mutation AND The member will be using Mekinist (trametinib) in combination with Tafenlar (dabrafenib) for adjuvant treatment.</p> <p>Anaplastic Thyroid Cancer. The member has a diagnosis of locally advanced or metastatic anaplastic thyroid cancer AND The member has a documented V600E mutation AND The member has no satisfactory locoregional treatment options AND The member will be using Tafenlar (dabrafenib) in combination with Mekinist (trametinib). Metastatic Solid Tumors: the member has a diagnosis of unresectable or metastatic solid tumors with documented BRAF V600E mutation AND the member has disease that has progressed on prior therapy and has no satisfactory alternative treatments AND Mekinist is given in combination with Tafenlar.</p> <p>Low-grade Glioma: The member has a diagnosis of low-grade glioma (LGG) AND The member has a documented BRAF V600E mutation AND Mekinist (trametinib) will be used in combination with Tafenlar (dabrafenib).</p> |
| <b>Age Restriction</b>              | Low-grade Glioma only: The member is a pediatric age 1 year of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Other Criteria      | <p>Renal cell carcinoma: Member has RCC and a bevacizumab product will be used in combo with interferon alpha. Recurrent Primary CNS Tumor (including Glioblastoma multiforme): Diagnosis of progressive or recurrent glioblastoma or anaplastic glioma AND a bevacizumab product is being used as a single agent or in combo with irinotecan, carmustine, lomustine or temozolomide AND the member does not have a CNS hemorrhage. Soft Tissue Sarcoma: One of the following applies: Diagnosis of angiosarcoma AND a bevacizumab product is being used as a single agent OR The member has a diagnosis of solitary fibrous tumor and a bevacizumab product is being used in combo with temozolomide. Macular Retinal Edema. Avastin is being used to treat central or branch retinal vein occlusion with macular retinal edema. Cervical Cancer: member has recurrent, or metastatic cervical cancer AND A bevacizumab product will be used as part of a supported combination therapy. Endometrial Cancer: The member has a diagnosis of endometrial cancer AND One of the following applies: The member has stage III-IV disease or recurrent disease AND a bevacizumab product will be used in combination with carboplatin and paclitaxel, followed by maintenance with a bevacizumab product maintenance OR The member has recurrent disease AND a bevacizumab product monotherapy will be used as second-line or subsequent therapy if not previously used. Malignant Pleural Mesothelioma. Diagnosis of unresectable malignant pleural mesothelioma and a bevacizumab product will be used in combo with cisplatin and pemetrexed or carboplatin and pemetrexed followed by maintenance with a bevacizumab product (for responders). Epithelial ovarian, fallopian tube, or primary peritoneal cancer: Diagnosis of epithelial ovarian, fallopian tube or primary peritoneal cancer AND One of the following applies: The disease is recurrent, platinum-resistant AND a bevacizumab product will be used in combination with paclitaxel, pegylated liposomal doxorubicin or topotecan AND the member has not received more than 2 prior chemotherapy regimens OR The disease is recurrent, platinum-sensitive AND a bevacizumab product will be used in combination with carboplatin and paclitaxel, or in combination with carboplatin and gemcitabine, followed by a bevacizumab product monotherapy AND The disease is stage III or IV AND initial surgical resection was completed AND a bevacizumab product will be used in combo with carboplatin and paclitaxel, followed by a bevacizumab product monotherapy OR . Age Related Macular Degeneration (Avastin requests only): Avastin (bevacizumab) is being used to treat age related macular degeneration. Diabetic Macular Edema (Avastin requests only): Avastin (bevacizumab) is being used to treat diabetic macular edema.</p> |

| Exclusion Criteria           | Member has disease progression on Nerlynx (neratinib). Member is taking Nerlynx (neratinib) total treatment for more than one year [applicable only to early stage breast cancer].                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Required Medical Information | Early stage Breast Cancer: The member has early stage (i.e. Stage I, II, III) documented HER2 + positive disease AND The member has completed adjuvant therapy with a trastuzumab containing treatment AND Nerlynx (neratinib) is being used for the treatment in extended adjuvant setting. Metastatic Breast Cancer. The member has metastatic or advanced breast cancer and all of the following apply: The member has documented HER2 positive disease and The member has received two or more prior anti-HER2 based regimens in the metastatic setting and Nerlynx (neratinib) is given in combination with capecitabine. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

For ALL and CML: The member has one of the following mutations: T315I, Y253H, E255K/V, or F359V/C/I.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Required Medical Information | Chronic Myelogenous Leukemia (CML). The member has a diagnosis of Philadelphia chromosome positive chronic myeloid leukemia (CML) AND One of the following applies: The member has accelerated or blast phase CML OR The member has a diagnosis of chronic phase CML that has not been previously treated, and one of the following applies: Intermediate- or high-risk score for disease progression OR Low-risk score for disease progression and has contraindication to, intolerance to, or unable to achieve treatment goals with imatinib OR The members has a diagnosis of chronic phase CML that has received previous treatment. Advanced Gastrointestinal Stromal Tumor (GIST). Diagnosis of advanced unresectable GIST. The member has progressive disease or is intolerant to prior therapy with imatinib, sunitinib, or Stivarga. Acute Lymphoblastic Leukemia (ALL). The member has diagnosis of Philadelphia positive acute lymphoblastic leukemia. Pediatric CML: Diagnosis of chronic phase Ph+ chronic myeloid leukemia (CML) OR Diagnosis of accelerated phase Ph+ chronic myeloid leukemia (CML) AND resistance, intolerance, or contraindication to prior TKI therapy. |
| Age Restriction              | Pediatric CML- member is greater than or equal to 1 year of age.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Other Criteria               | <p>Febrile Neutropenia Prophylaxis, in members with acute myeloid leukemia receiving chemotherapy: The member must have a diagnosis Acute Myeloid Leukemia (AML). The member must be receiving either induction chemotherapy OR consolidation Chemotherapy AND The member is not administering filgrastim product earlier than 24 hours after cytotoxic chemotherapy or within 24 hours before chemotherapy. Febrile Neutropenia Prophylaxis, In non-myeloid malignancies following Hematopoietic Stem Cell Transplant (HCST): The member must have had a Hematopoietic Stem Cell Transplant (HCST) (e.g. bone marrow transplant, peripheral-blood progenitor cell (PBPC) transplant) for a non-myeloid malignancy AND The member is not administering filgrastim product earlier than 24 hours after cytotoxic chemotherapy or within 24 hours before chemotherapy Harvesting of peripheral blood stem cells: The member is using as a component of a hematopoietic stem cell mobilization protocol and one of the following applies: is scheduled for autologous peripheral-blood stem cell (PBSC) transplantation, is storing cells for a possible future autologous transplant, or is donating stem cells for an allogeneic or syngeneic PBSC transplant. Neutropenic disorder, chronic (Severe), Symptomatic: The member must have a diagnosis of congenital, cyclic, or idiopathic neutropenia. Neutropenia in AIDS patients: The member must have a diagnosis of AIDS with neutropenia. Treatment of Aplastic Anemia: The member must have a diagnosis of Aplastic Anemia. Treatment of Agranulocytosis: The member must have a diagnosis of congenital or drug induced agranulocytosis. Hematopoietic Syndrome of Acute radiation syndrome: The member has been acutely exposed to myelosuppressive doses of radiation.</p> |

| Required Medical Information | Chronic Idiopathic Urticaria. Member has a diagnosis of chronic idiopathic urticaria. Member has remained symptomatic despite at least 2 weeks of H1 antihistamine therapy, unless contraindicated. Member will continue to receive H1 antihistamine therapy while on Xolair, unless contraindicated. Moderate or Severe persistent asthma. The patient has a diagnosis of moderate or severe persistent asthma. The patient has evidence of specific allergic sensitivity confirmed by positive skin test (i.e. prick/puncture test) or blood test (i.e. RAST) for a specific IgE or in vitro reactivity to a perennial aeroallergen. Member must have baseline serum IgE greater than or equal to 30 IU/ml. The patient has inadequately controlled asthma despite the use of Inhaled Corticosteroids. |
| Age Restriction              | The patient is 12 years of age or older for diagnosis of chronic idiopathic urticaria. The patient is 6 years of age or older for moderate to severe persistent asthma. The patient is 18 years of age or older for nasal polyps. The patient is 1 year or older for IgE Mediated Food Allergy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Prescriber Restriction       | Licensed Practitioner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Coverage Duration            | Plan Year Duration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Other Criteria               | Nasal Polyps: The member must meet all of the following criteria: have a diagnosis of nasal polyps (e.g., Chronic Rhinosinusitis with Nasal Polyposis [CRSwNP]) AND Xolair will be used in combination with a daily intranasal corticosteroid spray AND is unable to achieve adequate control of symptoms with maximum tolerated intranasal corticosteroid therapy. IgE Mediated Food Allergy: Member has been diagnosed with IgE mediated food allergy AND Member is using Xolair to reduce allergic reactions (Type I), including anaphylaxis, that may occur with accidental exposure to one of more foods.                                                                                                                                                                                           |
| Part B Prerequisite          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Exclusion Criteria           | All indications except Hepatocellular carcinoma, MSI-H or dMMR: Disease progression while on or following anti-PD-1/PD-L1 therapy (e.g. Opdivo [nivolumab], Keytruda [pembrolizumab], Tecentriq [atezolizumab], Bavencio [avelumab]). Adjuvant melanoma only: member is taking Opdivo (nivolumab) total treatment for more than one year. Neoadjuvant NSCLC only: member is taking Opdivo (nivolumab) total treatment in combination with platinum-doublet chemotherapy for more than 3 cycles. Hepatocellular carcinoma: Disease progression while on or following anti-PD-1/PD-L1 combination therapy (e.g. Imjudo [tremelimumab-actl] with Imfinzi [durvalumab]). MSI-H or dMMR: Disease progression while on or following anti-PD-1/PD-L1 combination therapy (e.g. Opdivo [nivolumab] with Yervoy [ipilimumab]).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Required Medical Information | Melanoma: diagnosis of unresectable or metastatic melanoma AND using as monotherapy OR in combo with Yervoy (ipilimumab) followed by Opdivo (nivolumab) or Opdivo Qvantig (nivolumab and hyaluronidase-nvhy) monotherapy. Melanoma-Adjuvant: diagnosis of stage IIB, IIC, III or stage IV melanoma AND undergone complete resection of disease AND using as adjuvant treatment AND using as monotherapy. Non-Small Cell Lung Cancer-subsequent therapy: diagnosis of metastatic squamous or non-squamous NSCLC AND experienced disease progression on or after chemo and EGFR inhibitor, if EGFR mutation positive or ALK inhibitor, if ALK positive AND using as monotherapy. Renal Cell Carcinoma (RCC): diagnosis of advanced RCC AND one of the following applies: will be using as subsequent therapy AND has received prior anti-angiogenic therapy OR Will be using in combo with Yervoy followed by Opdivo or Opdivo Qvantig monotherapy as first line therapy OR Will be using in combo with Cabometyx (cabozantinib) as first line therapy. Classical Hodgkin Lymphoma: diagnosis of classical Hodgkin Lymphoma AND one of the following applies: has relapsed or refractory disease AND using as monotherapy or in combo with a supported combo therapy OR has newly diagnosed disease AND using in combo with doxorubicin, vinblastine and dacarbazine. Non-Small Cell Lung Cancer (NSCLC)-Perioperative: diagnosis of NSCLC AND must not have any known epidermal growth factor receptor (EGFR) mutations or anaplastic lymphoma kinase (ALK) rearrangements AND must have resectable disease (tumors greater than or equal to 4 cm or node positive) AND using in the neoadjuvant setting, in combo with platinum-doublet chemo followed by Opdivo or Opdivo Qvantig as monotherapy. Hepatocellular Carcinoma: The member has a diagnosis of hepatocellular carcinoma AND using in combo with Yervoy followed by Opdivo or Opdivo Qvantig monotherapy. |

| Other Criteria         | <p>Non-nasopharyngeal recurrent or metastatic Squamous Cell Carcinoma of the Head and Neck (SCCHN) AND using as monotherapy AND disease progression on or after platinum based therapy. Locally advanced or metastatic urothelial cancer AND using as monotherapy AND 1 of the following apply: used as 2nd or subsequent line-therapy OR Disease progression within 12 months of neoadjuvant or adjuvant chemo OR high risk of recurrence after radical surgical resection of disease. Unresectable or metastatic urothelial carcinoma AND in combo with cisplatin and gemcitabine, followed by monotherapy maintenance. Unresectable or metastatic colorectal cancer with documented Microsatellite Instability-High (MSI-H) or Mismatch Repair Deficient (dMMR) AND 1 of the following applies: disease progressed following treatment with oxaliplatin-, irinotecan-, or fluoropyrimidine-based therapy and will be using Opdivo or Opdivo Qvantig as monotherapy OR using in combo with Yervoy, followed by Opdivo or Opdivo Qvantig as monotherapy. Non-small cell lung cancer (NSCLC) 1st Line Therapy: metastatic NSCLC AND 1 of the following applies: Disease with PD-L1 expression greater than or equal to 1% with no EGFR or ALK genomic tumor aberrations and given as 1st line therapy AND Tumor expresses PD-L1 as determined by FDA-approved test AND in combo with Yervoy OR Disease with no EGFR or ALK genomic tumor aberrations and given as 1st line therapy AND in combo with Yervoy AND used in combo with 2 cycles of platinum doublet chemo. Esophageal cancer: unresectable advanced, recurrent, or metastatic squamous cell carcinoma of the esophagus and 1 of the following apply: disease progressed after prior fluoropyrimidine- and platinum-based chemo AND will be given as subsequent monotherapy OR in combo with fluoropyrimidine- and platinum containing chemo for 1st line treatment AND the tumor expressed PD-L1 great than or equal to 1 OR as 1st line treatment Opdivo in combo with Yervoy AND the tumor expressed PD-L1 great than or equal. Unresectable malignant pleural mesothelioma AND 1 of the following scenarios applies: 1st-line treatment AND in combo with Yervoy OR as subsequent treatment, if not administered 1st-line AND as single agent OR in combo with Yervoy. Gastric Cancer, Gastroesophageal Junction Cancer, and Esophageal Adenocarcinoma (advanced or metastatic): given with a regimen containing fluoropyrimidine- and platinum-based chemo AND the tumor expressed PD-L1 great than or equal. Esophageal or Gastroesophageal Junction cancer (residual disease post-surgery and preoperative chemoradiation): received neoadjuvant chemoradiation AND complete surgical resection of esophageal or gastroesophageal junction AND has residual pathologic disease AND given as subsequent monotherapy. NSCLC- Neoadjuvant Therapy: early stage NSCLC AND has resectable disease (tumors greater than 4 cm or node positive) AND using in neoadjuvant setting, in combo with platinum-doublet chemo.</p> |

| Exclusion Criteria           | All indications except Hepatocellular carcinoma, MSI-H or dMMR: Disease progression while on or following anti-PD-1/PD-L1 therapy (e.g. Opdivo [nivolumab], Keytruda [pembrolizumab], Tecentriq [atezolizumab], Bavencio [avelumab]). Adjuvant melanoma only: member is taking Opdivo Qvantig (nivolumab and hyaluronidase-nvhy) total treatment for more than one year. Neoadjuvant NSCLC only: member is taking Opdivo Qvantig (nivolumab and hyaluronidase-nvhy) total treatment in combination with platinum-doublet chemotherapy for more than 3 cycles. Hepatocellular carcinoma: Disease progression while on or following anti-PD-1/PD-L1 combination therapy (e.g. Imjudo [tremelimumab-actl] with Imfinzi [durvalumab]). MSI-H or dMMR: Disease progression while on or following anti-PD-1/PD-L1 combination therapy (e.g. Opdivo [nivolumab] with Yervoy [ipilimumab]).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Required Medical Information | Melanoma: diagnosis of unresectable or metastatic melanoma AND using as monotherapy OR Opdivo (nivolumab) in combo with Yervoy (ipilimumab) followed by Opdivo Qvantig (nivolumab and hyaluronidase-nvhy) monotherapy. Melanoma-Adjuvant: diagnosis of stage IIB, IIC, III or stage IV melanoma AND undergone complete resection of disease AND using as adjuvant treatment AND using as monotherapy. Non-Small Cell Lung Cancer-subsequent therapy: diagnosis of metastatic squamous or non-squamous NSCLC AND experienced disease progression on or after chemo and EGFR inhibitor, if EGFR mutation positive or ALK inhibitor, if ALK positive AND using as monotherapy. Renal Cell Carcinoma (RCC): diagnosis of advanced RCC AND one of the following applies: will be using as subsequent therapy AND has received prior anti-angiogenic therapy OR Opdivo (nivolumab) using in combo with Yervoy followed by Opdivo Qvantig monotherapy as first line therapy OR Will be using in combo with Cabometyx (cabozantinib) as first line therapy. Non-Small Cell Lung Cancer (NSCLC)-Perioperative: diagnosis of NSCLC AND must not have any known epidermal growth factor receptor (EGFR) mutations or anaplastic lymphoma kinase (ALK) rearrangements AND must have resectable disease (tumors greater than or equal to 4 cm or node positive) AND using in the neoadjuvant setting, in combo with platinum-doublet chemo followed by Opdivo or Opdivo Qvantig as monotherapy. Hepatocellular Carcinoma: The member has a diagnosis of hepatocellular carcinoma AND Opdivo (nivolumab) using in combo with Yervoy, followed by Opdivo Qvantig monotherapy. |

| <b>Other Criteria</b>      | <p>Non-nasopharyngeal recurrent or metastatic Squamous Cell Carcinoma of the Head and Neck (SCCHN) AND using as monotherapy AND disease progression on or after platinum based therapy. Locally advanced or metastatic urothelial cancer AND using as monotherapy AND 1 of the following apply: used as 2nd or subsequent line-therapy OR Disease progression within 12 months of neoadjuvant or adjuvant chemo OR high risk of recurrence after radical surgical resection of disease. Unresectable or metastatic urothelial carcinoma AND in combo with cisplatin and gemcitabine, followed by monotherapy maintenance. Unresectable or metastatic colorectal cancer with documented Microsatellite Instability-High (MSI-H) or Mismatch Repair Deficient (dMMR) AND 1 of the following applies: disease progressed following treatment with oxaliplatin-, irinotecan-, or fluoropyrimidine-based therapy and will be as monotherapy OR Opdivo (nivolumab) using in combo with Yervoy, followed by Opdivo Qvantig as monotherapy.</p> <p>Non-small cell lung cancer (NSCLC) 1st Line Therapy: metastatic NSCLC AND 1 of the following applies: Disease with PD-L1 expression greater than or equal to 1% with no EGFR or ALK genomic tumor aberrations and given as 1st line therapy AND Tumor expresses PD-L1 as determined by FDA-approved test OR Disease with no EGFR or ALK genomic tumor aberrations and given as 1st line therapy AND used in combo with 2 cycles of platinum doublet chemo. Esophageal cancer: unresectable advanced, recurrent, or metastatic squamous cell carcinoma of the esophagus and 1 of the following apply: disease progressed after prior fluoropyrimidine- and platinum-based chemo AND will be given as subsequent monotherapy OR in combo with fluoropyrimidine- and platinum containing chemo for 1st line treatment AND the tumor expressed PD-L1 great than or equal to 1. Gastric Cancer, Gastroesophageal Junction Cancer, and Esophageal Adenocarcinoma (advanced or metastatic): given with a regimen containing fluoropyrimidine- and platinum-based chemo AND the tumor expressed PD-L1 great than or equal. Esophageal or Gastroesophageal Junction cancer (residual disease post-surgery and preoperative chemoradiation): received neoadjuvant chemoradiation AND complete surgical resection of esophageal or gastroesophageal junction AND has residual pathologic disease AND given as subsequent monotherapy.</p> <p>NSCLC- Neoadjuvant Therapy: early stage NSCLC AND has resectable disease (tumors greater than 4 cm or node positive) AND using in neoadjuvant setting, in combo with platinum-doublet chemo.</p> |
| <b>Part B Prerequisite</b> | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## OPDUALAG - VIAL (ML)

| PA Criteria                  | Criteria Details                                                                                                                                                                                                                                                                                     |

| Exclusion Criteria           | Member exceeds a total treatment of 52 weeks or 18 treatment cycles (applicable to neoadjuvant and/or adjuvant treatment).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Required Medical Information | Metastatic Breast Cancer. The member has a diagnosis of metastatic breast cancer and HER2 (human epidermal growth factor receptor2) positive disease (e.g., defined as IHC 3+ or IHC2+/ISH positive) AND one of the following applies: will be receiving Perjeta (pertuzumab) in combination with trastuzumab product and docetaxel or paclitaxel and has not received prior anti-HER2 therapy or chemotherapy for metastatic disease OR The member will be receiving Perjeta (pertuzumab) in combination with a trastuzumab product with or without cytotoxic therapy as second or subsequent line therapy in members previously treated with chemotherapy and a trastuzumab product in the absence of prior Perjeta (pertuzumab). Early Stage Breast Cancer. The member has a diagnosis of locally advanced, inflammatory, or early stage breast cancer (either greater than 2 cm in diameter or node positive) and HER2 positive disease (e.g., defined as IHC 3+ or IHC2+/ISH positive) AND Perjeta (pertuzumab) will be used as neoadjuvant treatment as part of a complete treatment regimen and one of the following applies: in combination with trastuzumab product and docetaxel or paclitaxel (after completion of combination of doxorubicin plus cyclophosphamide regimen) or in combination with TCH (docetaxel, carboplatin, and trastuzumab product) OR The member has a diagnosis of early stage HER2 (e.g., defined as IHC 3+ or IHC2+/ISH positive) positive breast cancer at high risk of recurrence (e.g., node positive disease, hormone receptor negative, T2 non-metastatic disease) AND Perjeta (pertuzumab) will be used as adjuvant therapy and one of the following applies: combination with trastuzumab product and paclitaxel or docetaxel (following doxorubicin plus cyclophosphamide regimen) or docetaxel plus carboplatin. |

| Exclusion Criteria           | The member has experienced disease progression while on pomalidomide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Required Medical Information | For brand Pomalyst requests: Member must have an intolerance or contraindication to generic pomalidomide AND member must meet clinical criteria: Multiple Myeloma: The member has a diagnosis of Multiple Myeloma AND One of the following situations apply: The member has received one prior line of therapy and will be using pomalidomide in combination with one of the following regimens: Bortezomib and dexamethasone, Carfilzomib and dexamethasone, or Darzalex (daratumumab), carfilzomib and dexamethasone OR The member has received at least one prior line of therapy, which included an immunomodulatory agent (e.g., lenalidomide or thalidomide) and a proteasome inhibitor (e.g., bortezomib or carfilzomib) AND The member demonstrated disease progression on or within 60 days of completion of the last therapy regimen and will be using pomalidomide in combination with one of the following regimens: Ninlaro (ixazomib) and dexamethasone, Dexamethasone, Xpovio (selinexor) and dexamethasone, Cyclophosphamide and dexamethasone, Single agent pomalidomide OR The member will be using pomalidomide in combination with one of the following regimens: Darzalex (daratumumab) and dexamethasone, Empliciti (elotuzumab) and dexamethasone, Sarclisa (isatuximab) and dexamethasone. Omission of corticosteroid from regimen is allowed if intolerance/contraindication. Kaposi Sarcoma: The member has a diagnosis of AIDS-related Kaposi sarcoma after failure of highly active antiretroviral therapy OR The member has a diagnosis of Kaposi sarcoma that is HIV-negative. |

| Exclusion Criteria           | Member experiences disease progression on Retevmo                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Required Medical Information | Non-small cell lung cancer. The member has a diagnosis of locally advanced or metastatic non-small cell lung cancer AND The disease is documented RET fusion positive AND Retevmo is being used as monotherapy. Medullary Thyroid cancer. The member has a diagnosis of metastatic or advanced medullary thyroid cancer AND The disease is documented RET mutant AND Retevmo is being used as a single agent for systemic therapy. Thyroid cancer. The member has a diagnosis of metastatic or advanced thyroid cancer AND The disease is documented RET fusion positive AND The disease is radioactive iodine refractory (if radioactive iodine is appropriate) AND Retevmo is being used as a single agent for systemic therapy. RET fusion-positive Solid Tumors: the member has locally advanced or metastatic solid tumors AND the solid tumors have documented rearranged during transfection (RET) gene fusion positive AND the member has progressed on or following prior systemic treatment or has no satisfactory alternative treatment options AND Retevmo (selpercatinib) is being administered as monotherapy. |

| Exclusion Criteria           | Chronic Lymphocytic Leukemia: High dose CLL therapies (doses greater than 500mg/m <sup>2</sup> ). The length of maintenance therapy exceeds 2 years for chronic lymphocytic leukemia. Non-Hodgkin's Lymphoma (CD-20 positive/B-cell): The member will be using rituximab as maintenance therapy for diffuse large B cell lymphoma (DLBCL). The length of maintenance therapy exceeds 2 years for low-grade non-Hodgkins lymphoma (e.g. follicular lymphoma, marginal zone lymphoma).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Required Medical Information | For requests for Rituxan or Truxima: member must have intolerance or contraindication with Ruxience or Riabni and meet the criteria below. Chronic Lymphocytic Leukemia. The member has a diagnosis of CLL. Non-Hodgkin's Lymphoma (CD-20 positive/B-Cell). The member has a diagnosis of CD-20 positive/B-cell Non-Hodgkin's lymphoma. Hodgkin's Disease (Hodgkin's Lymphoma). The member has a diagnosis of Hodgkin's Disease. The member will be using rituximab product for primary treatment or for relapsed or progressive disease AND disease has confirmed CD20 positivity. Rheumatoid Arthritis. The member has a diagnosis of moderately- to severely-active rheumatoid arthritis. The member has had previous treatment with, contraindication, or intolerance with two of the following: a preferred infliximab product (i.e., Remicade, Avsola, infliximab), Simponi Aria, or Tyenne. The member must be on concomitant treatment with methotrexate during rituximab product therapy, unless contraindicated or intolerant to methotrexate. |
| Age Restriction              | Wegener's Granulomatosis (WG) and Microscopic Polyangiitis (MPA): The member is 2 years of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Prescriber Restriction       | Licensed Practitioner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## RIABNI - VIAL (ML)

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other Criteria      | Waldenstram's macroglobulinemia. The member must have a diagnosis of Waldenstram's macroglobulinemia. Post-transplant lymphoproliferative disorder. The member has a diagnosis of Post-transplant Lymphoproliferative disease. Immune or Idiopathic Thrombocytopenic Purpura. The member must have a diagnosis of refractory primary immune or idiopathic thrombocytopenic purpura. Member has not had a splenectomy, but has had an insufficient response or is intolerant to corticosteroids, AND immunoglobulins (IVIG), OR has had a splenectomy with an inadequate response or is intolerant to procedure AND had an insufficient response or is intolerant to post-splenectomy corticosteroids. Refractory response is characterized as EITHER: Platelet count less than 25,000/microliter OR Active bleeding due to inadequate platelet function. The member must have had an inadequate response to post-splenectomy corticosteroid therapy for four consecutive weeks within the last three months. Diagnosis of Wegener's Granulomatosis OR Microscopic Polyangiitis. Must be taking rituximab product in combination with glucocorticoids. Pemphigus Vulgaris (PV). The member must have a diagnosis of moderate to severe Pemphigus Vulgaris. |
| Part B Prerequisite | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Exclusion Criteria           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | <p>Rheumatoid Arthritis: The member has a diagnosis of moderate to severely active rheumatoid arthritis AND the member has tried or cannot use at least one TNF blocker (e.g., adalimumab-adbm, adalimumab-adaz, Enbrel). Psoriatic Arthritis: The member has a diagnosis of active psoriatic arthritis AND the member has tried or cannot use at least one TNF blocker (e.g., adalimumab-adbm, adalimumab-adaz, Enbrel). Atopic Dermatitis: The member has a diagnosis of moderate to severe atopic dermatitis AND the member has tried or cannot use at least one other systemic therapy. Ulcerative Colitis: the member has a diagnosis of moderately to severely active ulcerative colitis AND the member has tried or cannot use at least one TNF blocker (e.g., adalimumab-adbm, adalimumab-adaz) or at least one approved systemic therapy if a TNF blocker cannot be used. Ankylosing Spondylitis: the member has a diagnosis of active ankylosing spondylitis AND the member has tried or cannot use at least one TNF blocker (e.g., adalimumab-adbm, adalimumab-adaz, Enbrel). Non-radiographic Axial Spondylarthritis: the member has a diagnosis of non-radiographic axial spondylarthritis with signs of inflammation AND the member has tried or cannot use at least one TNF blocker (e.g., adalimumab-adbm, adalimumab-adaz, Enbrel). Crohn's Disease: the member has a diagnosis of moderately to severely active crohn's disease AND the member has tried or cannot use at least one TNF blocker (e.g., adalimumab-adbm, adalimumab-adaz) or at least one approved systemic therapy if a TNF blocker cannot be used.</p> |
| Age Restriction              | <p>RA, UC, ankylosing spondylitis, Non-radiographic axial spondylarthritis, Giant Cell Arteritis and Crohn's Disease: The member is 18 years of age or older. Atopic Dermatitis: the member is 12 years of age or older. Psoriatic arthritis and polyarticular juvenile idiopathic arthritis: the member is 2 years of age or older.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Exclusion Criteria           | Chronic Lymphocytic Leukemia: High dose CLL therapies (doses greater than 500mg/m <sup>2</sup> ). The length of maintenance therapy exceeds 2 years for chronic lymphocytic leukemia. Non-Hodgkin's Lymphoma (CD-20 positive/B-cell): The member will be using rituximab as maintenance therapy for diffuse large B cell lymphoma (DLBCL). The length of maintenance therapy exceeds 2 years for low-grade non-Hodgkins lymphoma (e.g. follicular lymphoma, marginal zone lymphoma).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Required Medical Information | For requests for Rituxan or Truxima: member must have intolerance or contraindication with Ruxience or Riabni and meet the criteria below. Chronic Lymphocytic Leukemia. The member has a diagnosis of CLL. Non-Hodgkin's Lymphoma (CD-20 positive/B-Cell). The member has a diagnosis of CD-20 positive/B-cell Non-Hodgkin's lymphoma. Hodgkin's Disease (Hodgkin's Lymphoma). The member has a diagnosis of Hodgkin's Disease. The member will be using rituximab product for primary treatment or for relapsed or progressive disease AND disease has confirmed CD20 positivity. Rheumatoid Arthritis. The member has a diagnosis of moderately- to severely-active rheumatoid arthritis. The member has had previous treatment with, contraindication, or intolerance with two of the following: a preferred infliximab product (i.e., Remicade, Avsola, infliximab), Simponi Aria, or Tyenne. The member must be on concomitant treatment with methotrexate during rituximab product therapy, unless contraindicated or intolerant to methotrexate. |
| Age Restriction              | Wegener's Granulomatosis (WG) and Microscopic Polyangiitis (MPA): The member is 2 years of age or older.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Other Criteria      | Waldenström's macroglobulinemia. The member must have a diagnosis of Waldenström's macroglobulinemia. Post-transplant lymphoproliferative disorder. The member has a diagnosis of Post-transplant Lymphoproliferative disease. Immune or Idiopathic Thrombocytopenic Purpura. The member must have a diagnosis of refractory primary immune or idiopathic thrombocytopenic purpura. Member has not had a splenectomy, but has had an insufficient response or is intolerant to corticosteroids, AND immunoglobulins (IVIG), OR has had a splenectomy with an inadequate response or is intolerant to procedure AND had an insufficient response or is intolerant to post-splenectomy corticosteroids. Refractory response is characterized as EITHER: Platelet count less than 25,000/microliter OR Active bleeding due to inadequate platelet function. The member must have had an inadequate response to post-splenectomy corticosteroid therapy for four consecutive weeks within the last three months. Diagnosis of Wegener's Granulomatosis OR Microscopic Polyangiitis. Must be taking rituximab product in combination with glucocorticoids. Pemphigus Vulgaris (PV). The member must have a diagnosis of moderate to severe Pemphigus Vulgaris. |
| Part B Prerequisite | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Exclusion Criteria           | AML newly diagnosed: Members that are using Rydapt(midostaurin) for post-consolidation therapy. AML relapsed/refractory: Members that have experienced disease progression while on or following Rydapt (midostaurin), Members that are using Rydapt(midostaurin) for post-consolidation therapy. Systemic Mastocytosis: Members that have experienced disease progression while on or following Rydapt (midostaurin).                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Required Medical Information | Acute Myeloid Leukemia-Newly diagnosed: The member has newly diagnosed acute myeloid leukemia (AML) AND The member has documented FLT3 mutation-positive disease AND The member will be using Rydapt (midostaurin) in combination with standard cytarabine and daunorubicin induction and cytarabine consolidation chemotherapy. Systemic Mastocytosis: The member has a diagnosis of aggressive systemic mastocytosis (ASM), systemic mastocytosis with associated hematologic neoplasm (SM-AHN), or mast cell leukemia (MCL). Acute Myeloid Leukemia - Relapsed/Refractory: The member has relapsed or refractory acute myeloid leukemia (AML) AND The member has documented FLT3 mutation-positive disease AND The member will be using Rydapt (midostaurin) as a component of repeating the initial successful induction regimen, if late relapse (relapse occurring later than 12 months). |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Exclusion Criteria           | The member has experienced disease progression while on or following an anti-CD38 inhibitor (e.g. daratumumab, isatuximab-irfc).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Required Medical Information | Multiple myeloma (third line). The member has a diagnosis of multiple myeloma AND The member will be using isatuximab-irfc in combination with Pomalyst (pomalidomide) and dexamethasone (Omission of corticosteroid from regimen is allowed if intolerance/contraindication) AND The member has received at least two prior therapies including Revlimid (lenalidomide) and a proteasome inhibitor (e.g. bortezomib, carfilzomib). Multiple Myeloma (relapsed or refractory): The member has a diagnosis of relapsed or refractory multiple myeloma AND The member will be using isatuximab-irfc in combination with carfilzomib and dexamethasone (Omission of corticosteroid from regimen is allowed if intolerance/contraindication) AND The member has received at least one prior therapy. Newly Diagnosed Multiple Myeloma: The member has newly diagnosed multiple myeloma AND The member is ineligible for autologous stem cell transplant AND The member will be using isatuximab-irfc in combination with bortezomib, lenalidomide, and dexamethasone. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Exclusion Criteria           | The member has experienced disease progression while on or following an anti-CD38 inhibitor (e.g. daratumumab, isatuximab-irfc).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Required Medical Information | Multiple myeloma (third line). The member has a diagnosis of multiple myeloma AND The member will be using isatuximab-irfc in combination with Pomalyst (pomalidomide) and dexamethasone (Omission of corticosteroid from regimen is allowed if intolerance/contraindication) AND The member has received at least two prior therapies including Revlimid (lenalidomide) and a proteasome inhibitor (e.g. bortezomib, carfilzomib). Multiple Myeloma (relapsed or refractory): The member has a diagnosis of relapsed or refractory multiple myeloma AND The member will be using isatuximab-irfc in combination with carfilzomib and dexamethasone (Omission of corticosteroid from regimen is allowed if intolerance/contraindication) AND The member has received at least one prior therapy. Newly Diagnosed Multiple Myeloma: The member has newly diagnosed multiple myeloma AND The member is ineligible for autologous stem cell transplant AND The member will be using isatuximab-irfc in combination with bortezomib, lenalidomide, and dexamethasone. |

| Exclusion Criteria           | The member has experienced disease progression while on Stivarga (regorafenib). [Applicable to all indications except Gastrointestinal stromal tumor (GIST)]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Required Medical Information | Metastatic Colorectal Cancer. The member has a diagnosis of metastatic colorectal cancer AND The member is using Stivarga (regorafenib) as monotherapy AND The member has experienced disease progression or cannot use ALL of the following therapies: fluoropyrimidine (regimens include 5-FU/capecitabine), oxaliplatin-based chemotherapy, irinotecan-based chemotherapy, and anti-VEGF therapy (e.g., bevacizumab, ziv-aflibercept) AND If the member is RAS wild-type, has experienced disease progression or cannot use an anti-EGFR therapy (e.g., cetuximab, panitumumab). Gastrointestinal Stromal Tumor. The member has a diagnosis of locally advanced, unresectable or metastatic gastrointestinal stromal tumor AND The member has experienced disease progression or cannot take imatinib mesylate and sunitinib malate. Hepatocellular Cancers: The member has a diagnosis of hepatocellular carcinoma AND Stivarga (regorafenib) is being given as monotherapy AND The member has experienced progression after first line therapy (e.g., sorafenib). Soft Tissue sarcoma. Diagnosis of advanced or metastatic soft tissue sarcoma (e.g., angiosarcoma, non-adipocytic sarcoma, pleomorphic rhabdomyosarcoma) AND Stivarga (regorafenib) is being given as monotherapy. |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Exclusion Criteria           | Members have experienced disease progression while on or following PARP inhibitor therapy (eg, olaparib).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | Breast Cancer. Member has a diagnosis of locally advanced or metastatic, HER-2 negative breast cancer AND Member has documented deleterious germline or suspected germline BRCA mutated disease AND if member has hormone receptor positive disease then is endocrine refractory AND Talzenna (talazoparib) will be used as monotherapy. Metastatic Castration-Resistant Prostate Cancer (mCRPC). Member has a diagnosis of Metastatic Castration-Resistant Prostate Cancer (mCRPC) AND Member has a documented (HRR) gene-mutated disease AND Member will use Talzenna (talazoparib) in combination with androgen deprivation therapy (e.g. previous bilateral orchiectomy or luteinizing hormone-releasing hormone (LHRH) analog [i.e., LHRH agonist/ antagonist]) AND Talzenna (talazoparib) is given in combination with Xtandi (enzalutamide). |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Exclusion Criteria           | All indications except Bladder Cancer: Disease progression while on or following anti-PD-1/PD-L1 therapy (e.g. Opdivo [nivolumab], Keytruda [pembrolizumab], Tecentriq [atezolizumab], Bavencio [avelumab]). Adjuvant setting for Non-Small Cell Lung Cancer: member is taking Tecentriq (atezolizumab) total treatment for more than one year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Required Medical Information | Non-Small Cell Lung Cancer (advanced or metastatic frontline): The member has a diagnosis of advanced or metastatic NSCLC AND member has disease with no EGFR or ALK genomic tumor aberrations and one of the following scenarios is applied: The member has non-squamous cell histology AND Tecentriq will be given as a component of one of the two combo regimens: in combination with carboplatin and paclitaxel and Bevacizumab Product as first line therapy followed by maintenance therapy with combination an atezolizumab product and Bevacizumab Product OR in combo with Abraxane (nabpaclitaxel) and carboplatin as first line therapy. OR Disease has high PD-L1 expression [PD-L1 stained greater than or equal to 50% of tumor cells OR PD-L1 stained tumor-infiltrating immune cells covering greater than or equal to 10% of the tumor area] AND PD-L1 tumor expression is determined by an FDA-approved test AND will be given as first-line therapy AND The member will be using as monotherapy. Non-Small Cell Lung Cancer (metastatic - subsequent): The member has a diagnosis of metastatic non-small cell lung carcinoma AND The member has experienced disease progression on or after chemotherapy and EGFR inhibitor or ALK inhibitor (post confirmed EGFR or ALK genomic tumor aberration positivity) AND atezolizumab product will be used as monotherapy. Alveolar Soft Part Sarcoma (ASPS): The member has a diagnosis of unresectable or metastatic alveolar soft part sarcoma AND The member will be using an atezolizumab product as monotherapy. |

|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other Criteria         | <p>Small Cell Lung Cancer: The member has a diagnosis of extensive-stage small cell lung cancer AND atezolizumab product will be given in combination with etoposide and carboplatin as first line therapy followed by maintenance therapy with atezolizumab product, either as monotherapy or in combination with Zepzelca (lurbinectedin). Hepatocellular Carcinoma: The member has a diagnosis of unresectable or metastatic hepatocellular carcinoma AND atezolizumab product will be used as first line therapy in combination with bevacizumab product. Melanoma: The member has a diagnosis of unresectable or metastatic melanoma AND The member has a documented BRAF V600 activating mutation AND the member will use an atezolizumab product in combination with Cotellic (cobimetinib) and Zelboraf (vemurafenib). Non-Small Cell Lung Cancer (Adjuvant): The member must have a diagnosis of Stage II to IIIA non-small cell lung cancer AND The disease has expression of PD-L1 on greater than or equal to 1% of tumor cells as determined by an FDA-approved test AND The member is post complete surgical resection and adjuvant platinum-based chemotherapy AND The member will be using an atezolizumab product as monotherapy in the adjuvant setting. Bladder cancer: The member has a diagnosis of muscle invasive bladder cancer AND After cystectomy, the member has circulating tumor DNA molecular residual disease as determined by an FDA approved test AND An atezolizumab product will be used as a single agent as part of adjuvant treatment.</p> |

| Exclusion Criteria           | All indications except Bladder Cancer: Disease progression while on or following anti-PD-1/PD-L1 therapy (e.g. Opdivo [nivolumab], Keytruda [pembrolizumab], Tecentriq [atezolizumab], Bavencio [avelumab]). Adjuvant setting for Non-Small Cell Lung Cancer: member is taking Tecentriq (atezolizumab) total treatment for more than one year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Required Medical Information | Non-Small Cell Lung Cancer (advanced or metastatic frontline): The member has a diagnosis of advanced or metastatic NSCLC AND member has disease with no EGFR or ALK genomic tumor aberrations and one of the following scenarios is applied: The member has non-squamous cell histology AND Tecentriq will be given as a component of one of the two combo regimens: in combination with carboplatin and paclitaxel and Bevacizumab Product as first line therapy followed by maintenance therapy with combination an atezolizumab product and Bevacizumab Product OR in combo with Abraxane (nabpaclitaxel) and carboplatin as first line therapy. OR Disease has high PD-L1 expression [PD-L1 stained greater than or equal to 50% of tumor cells OR PD-L1 stained tumor-infiltrating immune cells covering greater than or equal to 10% of the tumor area] AND PD-L1 tumor expression is determined by an FDA-approved test AND will be given as first-line therapy AND The member will be using as monotherapy. Non-Small Cell Lung Cancer (metastatic - subsequent): The member has a diagnosis of metastatic non-small cell lung carcinoma AND The member has experienced disease progression on or after chemotherapy and EGFR inhibitor or ALK inhibitor (post confirmed EGFR or ALK genomic tumor aberration positivity) AND atezolizumab product will be used as monotherapy. Alveolar Soft Part Sarcoma (ASPS): The member has a diagnosis of unresectable or metastatic alveolar soft part sarcoma AND The member will be using an atezolizumab product as monotherapy. |

| Other Criteria         | <p>Small Cell Lung Cancer: The member has a diagnosis of extensive-stage small cell lung cancer AND atezolizumab product will be given in combination with etoposide and carboplatin as first line therapy followed by maintenance therapy with atezolizumab product, either as monotherapy or in combination with Zepzelca (lurbinectedin). Hepatocellular Carcinoma: The member has a diagnosis of unresectable or metastatic hepatocellular carcinoma AND atezolizumab product will be used as first line therapy in combination with bevacizumab product. Melanoma: The member has a diagnosis of unresectable or metastatic melanoma AND The member has a documented BRAF V600 activating mutation AND the member will use an atezolizumab product in combination with Cotellic (cobimetinib) and Zelboraf (vemurafenib). Non-Small Cell Lung Cancer (Adjuvant): The member must have a diagnosis of Stage II to IIIA non-small cell lung cancer AND The disease has expression of PD-L1 on greater than or equal to 1% of tumor cells as determined by an FDA-approved test AND The member is post complete surgical resection and adjuvant platinum-based chemotherapy AND The member will be using an atezolizumab product as monotherapy in the adjuvant setting. Bladder cancer: The member has a diagnosis of muscle invasive bladder cancer AND After cystectomy, the member has circulating tumor DNA molecular residual disease as determined by an FDA approved test AND An atezolizumab product will be used as a single agent as part of adjuvant treatment.</p> |

| Exclusion Criteria           | Member has experienced disease progression while on or following Tibsovo (ivosidenib)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Required Medical Information | Acute Myeloid Leukemia- Relapsed/Refractory: The member has a diagnosis of acute myeloid leukemia (AML) AND The member has relapsed or refractory disease AND The member has a documented IDH1 mutation AND one of the following applies: The member will be using Tibsovo (ivosidenib) as monotherapy OR the member will be using Tibsovo as a component of repeating the initial successful induction regimen, if late relapse (relapse occurring later than 12 months). Acute Myeloid Leukemia Newly diagnosed: The member has a diagnosis of acute myeloid leukemia (AML) AND the member has newly diagnosed disease AND one of the following applies: the member is not a candidate for intensive induction therapy due to comorbidities OR the member declines intensive induction therapy. The member has a documented IDH1 mutation AND the member will be using Tibsovo as monotherapy or in combination with azactidine. Cholangiocarcinoma: The member has locally advanced or metastatic cholangiocarcinoma AND the disease has documented isocitrate dehydrogenase-1 (IDH1) mutation AND Tibsovo (ivosidenib) will be a subsequent therapy and used as monotherapy. Myelodysplastic syndromes (MDS): The member has a diagnosis of myelodysplastic syndromes AND The member has relapsed or refractory disease AND The member has a documented IDH1 mutation AND The member will be using Tibsovo (ivosidenib) as monotherapy. |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Exclusion Criteria           | Members with colorectal cancer (CRC) in which RAS mutation status is unknown. Member has disease progression on Vectibix or Erbutux.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Required Medical Information | Colorectal Cancer [Wild-Type RAS; Wild-Type KRAS/NRAS]: The member has a diagnosis of advanced or metastatic colorectal cancer (mCRC) AND The member has colorectal cancer that is documented as wild-type, non-mutated KRAS and NRAS [wild-type RAS] AND one of the criteria following applies: Vectibix (panitumumab) will be used as monotherapy in members who had disease progression on or following fluoropyrimidine (e.g., capecitabine, fluorouracil), oxaliplatin, and irinotecan-containing chemotherapy regimens . OR Vectibix (panitumumab) will be used in combination with CAPEOX, FOLFOX or FOLFIRI OR Vectibix (panitumumab) will be used concurrently with irinotecan-based therapy. Colorectal Cancer [KRAS G12C-mutated]: The member has a diagnosis of metastatic colorectal cancer (mCRC) AND The colorectal cancer is documented as KRAS G12C-mutated, as determined by an FDA-approved test AND The member has received prior systemic treatment with chemotherapy [fluoropyrimidine-based chemotherapy (e.g., 5-fluorouracil, capecitabine), oxaliplatin, irinotecan] AND Vectibix (panitumumab) will be given in combination with Lumakras (sotorasib). |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Exclusion Criteria           | The member has experienced disease progression while on Venclexta (venetoclax).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Required Medical Information | Chronic Lymphocytic Leukemia (CLL): The member has a diagnosis of Chronic Lymphocytic Leukemia (CLL) and one of the following applies: The member has received at least one prior therapy OR The request is for first-line therapy AND the member is using Venclexta (venetoclax) as part of a supported combination therapy. Mantle Cell Lymphoma: The member has a diagnosis of MCL AND one of the following applies: the member is using Venclexta (venetoclax) as second or subsequent line therapy AND the member is using Venclexta (venetoclax) as monotherapy or in combination with a rituximab product or in combination with Imbruvica (ibrutinib) OR The member has untreated, TP53 mutated disease AND the member is using Venclexta (venetoclax) in combination with Brukinsa (zanubrutinib) and Gazyva (obinutuzumab). Acute Myeloid Leukemia: The member has a diagnosis of acute myeloid leukemia (AML) AND one of the following applies: the disease is newly diagnosed AND the member is 75 years or older AND the member will be using Venclexta (venetoclax) in combination with azacitidine, or decitabine, or low-dose cytarabine OR the disease is newly diagnosed AND the member has comorbidities that preclude the use of intensive induction chemotherapy (e.g. baseline Eastern Cooperative Oncology Group (ECOG) performance status of 2-3, severe cardiac or pulmonary comorbidity, moderate hepatic impairment, or creatinine clearance less than 45 ml/min) AND the member will be using Venclexta (venetoclax) in combination with azacitidine, or decitabine, or low-dose cytarabine OR The member has relapsed/refractory disease AND Venclexta (venetoclax) will be used as part of supported combination therapy. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Exclusion Criteria           | The member has experienced disease progression while on Venclexta (venetoclax).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Required Medical Information | Chronic Lymphocytic Leukemia (CLL): The member has a diagnosis of Chronic Lymphocytic Leukemia (CLL) and one of the following applies: The member has received at least one prior therapy OR The request is for first-line therapy AND the member is using Venclexta (venetoclax) as part of a supported combination therapy. Mantle Cell Lymphoma: The member has a diagnosis of MCL AND one of the following applies: the member is using Venclexta (venetoclax) as second or subsequent line therapy AND the member is using Venclexta (venetoclax) as monotherapy or in combination with a rituximab product or in combination with Imbruvica (ibrutinib) OR The member has untreated, TP53 mutated disease AND the member is using Venclexta (venetoclax) in combination with Brukinsa (zanubrutinib) and Gazyva (obinutuzumab). Acute Myeloid Leukemia: The member has a diagnosis of acute myeloid leukemia (AML) AND one of the following applies: the disease is newly diagnosed AND the member is 75 years or older AND the member will be using Venclexta (venetoclax) in combination with azacitidine, or decitabine, or low-dose cytarabine OR the disease is newly diagnosed AND the member has comorbidities that preclude the use of intensive induction chemotherapy (e.g. baseline Eastern Cooperative Oncology Group (ECOG) performance status of 2-3, severe cardiac or pulmonary comorbidity, moderate hepatic impairment, or creatinine clearance less than 45 ml/min) AND the member will be using Venclexta (venetoclax) in combination with azacitidine, or decitabine, or low-dose cytarabine OR The member has relapsed/refractory disease AND Venclexta (venetoclax) will be used as part of supported combination therapy. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Required Medical Information | Metastatic Breast cancer- initial endocrine based therapy. The member has a diagnosis of advanced or metastatic hormone receptor (HR)-positive and human epidermal growth factor receptor 2 (Her2neu)-negative breast cancer AND Verzenio (abemaciclib) is given in combination with an aromatase inhibitor (e.g., letrozole) as first line endocrine based therapy. Metastatic breast cancer combination therapy with Faslodex (fulvestrant). The member has diagnosis of advanced or metastatic hormone receptor (HR) positive human epidermal growth factor receptor 2 (HER2) negative breast cancer AND The member has experienced disease progression on endocrine therapy (e.g., anastrozole) AND Verzenio (abemaciclib) is given in combination with Faslodex (fulvestrant). Metastatic breast cancer monotherapy: The member has diagnosis of advanced or metastatic HR positive, HER2 negative breast cancer AND the member has experienced disease progression on endocrine therapy (e.g., anastrozole) and chemotherapy in the metastatic setting AND Verzenio (abemaciclib) is being used as monotherapy. Early Breast cancer - combination therapy: The member has a diagnosis of HR positive, HER2 negative, node positive, early breast cancer at high risk of recurrence AND Verzenio (abemaciclib) is given in combination with tamoxifen or aromatase inhibitor. |

| <b>Required Medical Information</b> | Chronic Idiopathic Urticaria. Member has a diagnosis of chronic idiopathic urticaria. Member has remained symptomatic despite at least 2 weeks of H1 antihistamine therapy, unless contraindicated. Member will continue to receive H1 antihistamine therapy while on Xolair, unless contraindicated. Moderate or Severe persistent asthma. The patient has a diagnosis of moderate or severe persistent asthma. The patient has evidence of specific allergic sensitivity confirmed by positive skin test (i.e. prick/puncture test) or blood test (i.e. RAST) for a specific IgE or in vitro reactivity to a perennial aeroallergen. Member must have baseline serum IgE greater than or equal to 30 IU/ml. The patient has inadequately controlled asthma despite the use of Inhaled Corticosteroids. |
| <b>Age Restriction</b>              | The patient is 12 years of age or older for diagnosis of chronic idiopathic urticaria. The patient is 6 years of age or older for moderate to severe persistent asthma. The patient is 18 years of age or older for nasal polyps. The patient is 1 year or older for IgE Mediated Food Allergy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Exclusion Criteria           | Members that have experienced disease progression while on Xtandi (enzalutamide).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Required Medical Information | Prostate Cancer (metastatic castration-resistant): The member has metastatic castration-resistant prostate cancer (CRPC). Prostate Cancer (non-metastatic castration-resistant): The member has a diagnosis of non-metastatic castration-resistant prostate cancer AND The member will use Xtandi (enzalutamide) in combination with androgen deprivation therapy (e.g. previous bilateral orchiectomy or luteinizing hormone-releasing hormone (LHRH) analog [i.e., LHRH agonist/ antagonist]). Prostate Cancer (metastatic castration-sensitive): the member has a diagnosis of metastatic castration-sensitive prostate cancer AND the member will use Xtandi (enzalutamide) in combination with androgen deprivation therapy (e.g. previous bilateral orchiectomy or luteinizing hormone-releasing hormone (LHRH) analog [i.e., LHRH agonist/ antagonist]). Prostate Cancer (non-metastatic castration-sensitive): The member has a diagnosis of non-metastatic castration-sensitive prostate cancer (nmCSPC) with biochemical recurrence at high risk for metastasis (biochemical recurrence at high risk for metastasis defined as prostate-specific antigen [PSA] doubling time less than or equal to 9 months, PSA greater than or equal to 1 ng/mL post radical prostatectomy, or screening PSA greater than or equal to 2 ng/mL above nadir post radiotherapy). |

| Exclusion Criteria           | Melanoma: Concomitant Zelboraf (vemurafenib), Tafinlar (dabrafenib), Cotellic (cobimetnib) or Mekinist (trametinib) therapy AND The member has had progression of disease on adjuvant therapy with Yervoy (ipilimumab). MSI-H or dMMR: Disease progression while on or following previous anti-CTLA4-based combinations (e.g., Opdivo [nivolumab] with Yervoy [ipilimumab]). Hepatocellular carcinoma: Disease progression while on or following previous anti-CTLA4-based combinations (e.g., Imjudo [tremelimumab-actl] with Imfinzi [durvalumab]).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Required Medical Information | Melanoma. The member has a diagnosis of unresectable or metastatic melanoma OR Adjuvant treatment of cutaneous melanoma with pathologic involvement of regional lymph nodes of more than 1 millimeter who have undergone complete resection, including total lymphadenectomy. The member is naive to Yervoy (ipilimumab). The member has an Eastern Cooperative Oncology Group (ECOG) performance status of 0-2. Melanoma - Reauthorization Criteria unresectable or metastatic. The member had stable disease, partial response or complete response for greater than 3 months following the completion of initial induction (completion of four cycles within a 16 week period. Members who were unable to tolerate or receive the complete induction regimen within 16 weeks of initiation will not receive approval). AND The member has progressive disease, necessitating reinduction therapy with Yervoy (ipilimumab). AND The member has an Eastern Cooperative Oncology Group (ECOG) performance status of 0-2. Reauth adjuvant treatment of cutaneous melanoma. The member has not had disease recurrence or unacceptable toxicity with Yervoy (ipilimumab) AND The total duration of treatment is less than 3 years AND The member has an ECOG performance status of 0-2. Renal Cell Carcinoma. The member has a diagnosis of advanced renal cell carcinoma (RCC) AND The member has predominant clear cell histology AND The member will be using Yervoy (ipilimumab) in combination with Opdivo (nivolumab) AND The member will be using for first line therapy. |

| Other Criteria      | <p>Microsatellite Instability-High (MSI-H) or Mismatch Repair Deficient (dMMR) Metastatic Colorectal Cancer. The member has a diagnosis of unresectable or metastatic colorectal cancer with documented microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR) AND The member will be using Yervoy (ipilimumab) in combination with Opdivo (nivolumab). Hepatocellular carcinoma: The member has a diagnosis of hepatocellular carcinoma AND The member will be using Yervoy (ipilimumab) in combination with Opdivo (nivolumab). Non-small cell lung cancer (NSCLC) -- First Line Therapy: The member must have a diagnosis of metastatic non-small cell lung cancer (NSCLC) AND one of the following applies: Disease with PD-L1 expression greater than or equal to 1% with no EGFR or ALK genomic tumor aberrations and given as first line therapy AND Tumor expresses PD-L1 as determined by an FDA-approved test AND Will be used in combination with Opdivo (nivolumab) OR Disease with no EGFR or ALK genomic tumor aberrations and given as first line therapy AND Will be used in combination with Opdivo (nivolumab) AND Will be used in combination with two cycles of platinum doublet chemotherapy. Malignant pleural mesothelioma: The member has a diagnosis of unresectable malignant pleural mesothelioma AND The member will be using for first-line or subsequent treatment, if not administered first-line AND Yervoy (ipilimumab) will be used in combination with Opdivo (nivolumab). Esophageal Cancer (squamous cell carcinoma): the member has unresectable advanced, recurrent, or metastatic squamous cell carcinoma of the esophagus AND Yervoy will be given as first line treatment in combination with Opdivo.</p> |

| Other Criteria               | <p>Febrile Neutropenia Prophylaxis, in members with acute myeloid leukemia receiving chemotherapy: The member must have a diagnosis Acute Myeloid Leukemia (AML). The member must be receiving either induction chemotherapy OR consolidation Chemotherapy AND The member is not administering filgrastim product earlier than 24 hours after cytotoxic chemotherapy or within 24 hours before chemotherapy. Febrile Neutropenia Prophylaxis, In non-myeloid malignancies following Hematopoietic Stem Cell Transplant (HCST): The member must have had a Hematopoietic Stem Cell Transplant (HCST) (e.g. bone marrow transplant, peripheral-blood progenitor cell (PBPC) transplant) for a non-myeloid malignancy AND The member is not administering filgrastim product earlier than 24 hours after cytotoxic chemotherapy or within 24 hours before chemotherapy Harvesting of peripheral blood stem cells: The member is using as a component of a hematopoietic stem cell mobilization protocol and one of the following applies: is scheduled for autologous peripheral-blood stem cell (PBSC) transplantation, is storing cells for a possible future autologous transplant, or is donating stem cells for an allogeneic or syngeneic PBSC transplant. Neutropenic disorder, chronic (Severe), Symptomatic: The member must have a diagnosis of congenital, cyclic, or idiopathic neutropenia. Neutropenia in AIDS patients: The member must have a diagnosis of AIDS with neutropenia. Treatment of Aplastic Anemia: The member must have a diagnosis of Aplastic Anemia. Treatment of Agranulocytosis: The member must have a diagnosis of congenital or drug induced agranulocytosis. Hematopoietic Syndrome of Acute radiation syndrome: The member has been acutely exposed to myelosuppressive doses of radiation.</p> |
| Part B Prerequisite          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Exclusion Criteria           | Members that have experienced disease progression while on or following PARP inhibitor therapy [e.g., Rubraca (rucaparib), Lynparza (olaparib), Zejula (niraparib)].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Required Medical Information | Epithelial Ovarian Cancer, Fallopian Tube, or Peritoneal Cancer subsequent line maintenance therapy: The member has a diagnosis of recurrent epithelial ovarian cancer, fallopian tube cancer, or primary peritoneal cancer AND The member is in complete or partial response to their last platinum regimen AND The member will utilize Zejula (niraparib) as a monotherapy* AND *Discontinue Bevacizumab product before initiating maintenance therapy with Zejula. Advanced Ovarian Cancer, Fallopian Tube, or Peritoneal Cancer First Line Maintenance Therapy: member has a diagnosis of advanced epithelial ovarian, fallopian tube, or primary peritoneal cancer AND Members disease is associated with homologous recombination deficiency (HRD) positive status defined by either: a deleterious OR suspected deleterious BRCA mutation or genomic instability, as defined by an FDA approved test. Member is in complete response or partial response to first line treatment with platinum based chemotherapy AND member will utilize Zejula (niraparib) as monotherapy. |

| Exclusion Criteria           | IgA deficient members or presence of antibodies against IgA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Required Medical Information | The member must meet ALL of the following criteria: Diagnosis of congenital alpha1-antitrypsin deficiency with clinically evident emphysema and chronic replacement therapy is needed AND Has an alpha1-antitrypsin phenotype of PiZZ, PiZ(null), or PI (null, null) or phenotypes associated with reduced serum alpha-1 antitrypsin concentrations, AND an initial serum alpha 1-antitrypsin concentration of less than 57mg/dL when measured by nephelometry OR less than 80 mg/dL when measured by radial immunodiffusion. (These products should not be used in individuals with the PiMZ or PiMS phenotypes of alpha1-antitrypsin deficiency because these individuals appear to be at small risk of developing clinically evident emphysema.) |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Exclusion Criteria           | Malignant Pleural Mesothelioma, Soft Tissue Sarcoma, Recurrent Primary CNS Tumor (including Glioblastoma multiforme), Renal Cell Carcinoma, Non-small cell lung cancer (non-squamous cell histology): The member has experienced disease progression while on or following a bevacizumab product. Metastatic colorectal cancer: A bevacizumab product may not be used in conjunction with Vectibix (panitumumab) or Erbitux (cetuximab).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Required Medical Information | For Avastin (bevacizumab), Alymsys (bevacizumab-maly), Jobevne (bevacizumab-nwgd), and Vegzelma (bevacizumab-adcd) oncology requests: member must have an intolerance or contraindication with Mvasi or Zirabev. Metastatic colorectal cancer: metastatic colorectal cancer AND 1 of the following applies: using a bevacizumab product in combo with fluoropyrimidine (e.g., 5-fluorouracil or capecitabine) based chemo for 1st or 2nd-line therapy OR in combo with fluoropyrimidine-irinotecan or fluoropyrimidine-oxaliplatin-based chemo for 2nd-line therapy in patients who have progressed on 1st-line bevacizumab-containing regimens. Non-small cell lung cancer (non-squamous cell histology). NSCLC with non-squamous cell histology AND the disease is unresectable, locally advanced, recurrent, or metastatic AND A bevacizumab product will be used as part of a supported combination chemotherapy. Hepatocellular carcinoma: unresectable or metastatic HCC AND a bevacizumab product will be used as 1st line therapy in combo with an atezolizumab product. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Other Criteria      | <p>Renal cell carcinoma: Member has RCC and a bevacizumab product will be used in combo with interferon alpha. Recurrent Primary CNS Tumor (including Glioblastoma multiforme): Diagnosis of progressive or recurrent glioblastoma or anaplastic glioma AND a bevacizumab product is being used as a single agent or in combo with irinotecan, carmustine, lomustine or temozolomide AND the member does not have a CNS hemorrhage. Soft Tissue Sarcoma: One of the following applies: Diagnosis of angiosarcoma AND a bevacizumab product is being used as a single agent OR The member has a diagnosis of solitary fibrous tumor and a bevacizumab product is being used in combo with temozolomide. Macular Retinal Edema. Avastin is being used to treat central or branch retinal vein occlusion with macular retinal edema. Cervical Cancer: member has recurrent, or metastatic cervical cancer AND A bevacizumab product will be used as part of a supported combination therapy. Endometrial Cancer: The member has a diagnosis of endometrial cancer AND One of the following applies: The member has stage III-IV disease or recurrent disease AND a bevacizumab product will be used in combination with carboplatin and paclitaxel, followed by maintenance with a bevacizumab product maintenance OR The member has recurrent disease AND a bevacizumab product monotherapy will be used as second-line or subsequent therapy if not previously used. Malignant Pleural Mesothelioma. Diagnosis of unresectable malignant pleural mesothelioma and a bevacizumab product will be used in combo with cisplatin and pemetrexed or carboplatin and pemetrexed followed by maintenance with a bevacizumab product (for responders). Epithelial ovarian, fallopian tube, or primary peritoneal cancer: Diagnosis of epithelial ovarian, fallopian tube or primary peritoneal cancer AND One of the following applies: The disease is recurrent, platinum-resistant AND a bevacizumab product will be used in combination with paclitaxel, pegylated liposomal doxorubicin or topotecan AND the member has not received more than 2 prior chemotherapy regimens OR The disease is recurrent, platinum-sensitive AND a bevacizumab product will be used in combination with carboplatin and paclitaxel, or in combination with carboplatin and gemcitabine, followed by a bevacizumab product monotherapy AND The disease is stage III or IV AND initial surgical resection was completed AND a bevacizumab product will be used in combo with carboplatin and paclitaxel, followed by a bevacizumab product monotherapy OR . Age Related Macular Degeneration (Avastin requests only): Avastin (bevacizumab) is being used to treat age related macular degeneration. Diabetic Macular Edema (Avastin requests only): Avastin (bevacizumab) is being used to treat diabetic macular edema.</p> |

| Exclusion Criteria           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Required Medical Information | <p>Osteoporosis: The member has a diagnosis of osteoporosis. Has new fractures or significant loss of bone mineral density despite previous treatment, contraindication, or intolerance to any other oral bisphosphonate. Osteoporosis Prophylaxis in postmenopausal members: The member is postmenopausal. Has new fractures or significant loss of bone mineral density despite previous treatment, contraindication, or intolerance to any other oral bisphosphonate. Glucocorticoid induced Osteoporosis in men and women taking systemic glucocorticoids: Diagnosis of glucocorticoid induced osteoporosis or is either initiating or continuing systemic glucocorticoids with a daily dosage equivalent of 7.5 mg or greater of prednisone and is expected to remain on glucocorticoids for at least 12 months AND has new fractures or significant loss of bone mineral density despite previous treatment, contraindication, or intolerance to any other oral bisphosphonate .</p> <p>Paget's Disease: Diagnosis of Paget's disease. The member has continued elevation(s) in serum alkaline phosphatase (SAP) of two times or higher than the upper limit of normal despite previous treatment, contraindication, or intolerance to any other oral bisphosphonate. And the member: Is symptomatic OR is at risk for complications from their disease, to induce remission, or to normalize serum alkaline phosphatase. Brand Reclast request only: Members must have previous treatment, contraindication, or intolerance to generic Zoledronic acid (generic Reclast).</p> |

| Off-Label Uses               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Exclusion Criteria           | Anal carcinoma: Disease progression on previous anti-PD-1/PD-L1 therapy (e.g., pembrolizumab, nivolumab) AND For first line therapy: total treatment duration with Zynyz (retifanlimab-dlwr) is more than 12 months.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Required Medical Information | Merkel Cell Carcinoma: The member has a diagnosis of recurrent locally advanced or metastatic merkel cell carcinoma AND Zynyz (retifanlimab-dlwr) will be used as monotherapy. Anal carcinoma: The member has a diagnosis of inoperable locally recurrent or metastatic squamous cell carcinoma of the anal canal (SCAC) AND One of the following applies: Zynyz (retifanlimab-dlwr) will be used as first line therapy in combination with carboplatin and paclitaxel, followed by Zynyz (retifanlimab-dlwr) monotherapy OR Zynyz (retifanlimab-dlwr) will be used as a single agent after disease progression or intolerance to platinum-based chemotherapy. |
| Age Restriction              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Prescriber Restriction       | Licensed Practitioner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Coverage Duration            | Six months duration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Other Criteria               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Part B Prerequisite          | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

The following drugs are subject to a Medicare Part B or D authorization depending upon the circumstances. Information may need to be submitted describing the use and setting of the drug to make the determination.

## PART B VERSUS PART D

---

### Products Affected

- Akynzeo (netupitant) 300 mg-0.5 mg capsule
- aprepitant 125 MG; 125 mg (1)- 80 MG (2); 40 MG; 80 MG; capsule
- Azasan 100 MG; 75 MG; tablet
- CellCept 200 MG/ML; 250 MG; 500 MG; capsule
- CellCept 200 MG/ML; 250 MG; 500 MG; tablet
- chlorpromazine 10 MG; 25 MG; tablet
- cyclophosphamide 25 MG; 50 MG; capsule
- cyclosporine 100 MG; 25 MG; capsule
- cyclosporine modified 100 MG; 100 MG/ML; 25 MG; 50 MG; oral solution
- dronabinol 10 MG; 2.5 MG; 5 MG; 5 MG/ML; oral solution
- Emend 125 mg (1)-80 mg (2) capsules in a dose pack
- Envarsus XR 0.75 MG; 1 MG; 4 MG; tablet,extended release
- Gengraf 100 MG; 100 MG/ML; 25 MG; capsule
- granisetron HCl 1 MG; tablet
- Imuran 50 MG; tablet
- Marinol 10 MG; 2.5 MG; 5 MG; capsule
- methotrexate sodium 2.5 MG; tablet
- Millipred 5 MG; tablet
- mycophenolate mofetil 200 MG/ML; 250 MG; 500 MG; capsule
- mycophenolate mofetil 200 MG/ML; 250 MG; 500 MG; tablet
- aprepitant 125 mg (1)-80 mg (2) capsules in a dose pack
- Astagraf XL 0.5 MG; 1 MG; 5 MG; capsule,extended release
- azathioprine 100 MG; 50 MG; 75 MG; tablet
- CellCept 200 MG/ML; 250 MG; 500 MG; oral suspension
- CellCept Intravenous 500 MG; intravenous solution
- Compazine 10 MG; 5 MG; tablet
- cyclophosphamide 25 MG; 50 MG; tablet
- cyclosporine modified 100 MG; 100 MG/ML; 25 MG; 50 MG; capsule
- dronabinol 10 MG; 2.5 MG; 5 MG; 5 MG/ML; capsule
- Emend 125 mg (1)- 80 MG (2); 125 mg (25 mg/ ML FINAL CONC.); 80 MG; capsule
- Emend 125 mg (25 mg/mL final conc.) oral suspension
- everolimus (immunosuppressive) 0.25 MG; 0.5 MG; 0.75 MG; 1 MG; tablet
- Gengraf 100 MG; 100 MG/ML; 25 MG; oral solution
- Granisol 1 MG/5 ML; oral solution
- Jylamvo 2 MG/ML; oral solution
- Medrol 16 MG; 2 MG; 4 MG; 8 MG; tablet
- methylprednisolone 16 MG; 32 MG; 4 MG; 8 MG; tablet
- mycophenolate 500 MG; intravenous solution
- mycophenolate mofetil 200 MG/ML; 250 MG; 500 MG; oral powder for suspension
- mycophenolate sodium 180 MG; 360 MG; tablet,delayed release

- Myfortic 180 MG; 360 MG; tablet,delayed release
- Neoral 100 MG; 100 MG/ML; 25 MG; capsule
- ondansetron 16 MG; 4 MG; 8 MG; disintegrating tablet
- ondansetron HCl 4 MG; 4 MG/5 mL; 8 MG; tablet
- Pediapred 5 mg base/5 mL (6.7 MG/5 mL); oral solution
- prednisolone 15 MG/5 mL; 5 MG; oral solution
- prednisolone sodium phosphate 10 MG; 10 MG/5 mL; 15 MG; 15 mg/5 mL (3 MG/ML); 20 mg/5 mL (4 MG/ML); 25 mg/5 mL (5 MG/ML); 30 MG; 5 mg base/5 mL (6.7 MG/5 mL); oral soln
- prednisone 1 MG; 10 MG; 2 MG; 2.5 MG; 20 MG; 5 MG; 5 MG/5 mL; 50 MG; oral solution
- prednisone 1 MG; 10 MG; 2 MG; 2.5 MG; 20 MG; 5 MG; 5 MG/5 mL; 50 MG; tablet,delayed release
- prochlorperazine maleate 10 MG; 5 MG; tablet
- Prograf 0.2 MG; 0.5 MG; 1 MG; 5 MG; oral granules in packet
- Sandimmune 100 MG; 25 MG; capsule
- sirolimus 0.5 MG; 1 MG; 1 MG/ML; 2 MG; tablet
- tacrolimus 0.5 MG; 1 MG; 5 MG; capsule, immediate-release
- Trexall 10 MG; 15 MG; 5 MG; 7.5 MG; tablet
- Varubi 90 MG; tablet
- Xatmep 2.5 MG/ML; oral solution
- Myhibbin 200 MG/ML; oral suspension
- Neoral 100 MG; 100 MG/ML; 25 MG; oral solution
- ondansetron HCl 4 MG; 4 MG/5 mL; 8 MG; oral solution
- Orapred ODT 10 MG; 15 MG; 30 MG; disintegrating tablet
- prednisolone 10 MG; 10 MG/5 mL; 15 MG; 15 mg/5 mL (3 MG/ML); 20 mg/5 mL (4 MG/ML); 25 mg/5 mL (5 MG/ML); 30 MG; 5 mg base/5 mL (6.7 MG/5 mL); disintegrating tablet
- prednisolone 15 MG/5 mL; 5 MG; tablet
- prednisolone sodium phosphate 10 MG; 10 MG/5 mL; 15 MG; 15 mg/5 mL (3 MG/ML); 20 mg/5 mL (4 MG/ML); 25 mg/5 mL (5 MG/ML); 30 MG; 5 mg base/5 mL (6.7 MG/5 mL); oral solution
- prednisone 1 MG; 10 MG; 2 MG; 2.5 MG; 20 MG; 5 MG; 5 MG/5 mL; 50 MG; tablet
- Prednisone Intensol 5 MG/ML; oral concentrate
- Prograf 0.2 MG; 0.5 MG; 1 MG; 5 MG; capsule
- Rayos 1 MG; 2 MG; 5 MG; tablet,delayed release
- sirolimus 0.5 MG; 1 MG; 1 MG/ML; 2 MG; oral solution
- Syndros 5 MG/ML; oral solution
- tacrolimus XL 0.5 MG; 1 MG; 5 MG; capsule,extended release 24 hr
- trimethobenzamide 300 MG; capsule
- Veripred 20 20 mg/5 mL (4 MG/ML); oral solution
- Zortress 0.25 MG; 0.5 MG; 0.75 MG; 1 MG; tablet
