

Applied Behavior Analysis Case Supervision Update

Notice date: July 14, 2026
To: Humana Healthy Horizons in Oklahoma® provider network
From: Humana Healthy Horizons in Oklahoma
Subject: Applied behavior analysis case supervision update
Effective date: October 12, 2026

The Oklahoma Health Care Authority (OHCA) has approved an update to applied behavior analysis (ABA) supervision standards for Humana Healthy Horizons® in Oklahoma, increasing required case supervision from 5% to 10% of direct treatment hours, consistent with Council of Autism Service Providers (CASP) guidance.

This update is effective October 12, 2026. Providers may implement the updated supervision standard earlier, at their discretion, and are encouraged to do so where feasible.

This update applies to clinical oversight activities only and does not change prior authorization requirements, eligibility, Early and Periodic Screening, Diagnostic and Treatment (EPSDT) coverage, or approved treatment hours. ABA services will continue to be authorized based on medical necessity and individual clinical need.

Many providers already meet or exceed this supervision level. The update is intended to support strong clinical oversight, treatment fidelity and high-quality, individualized care while maintaining stable access for members.
