Exclusions for HEDIS measures

In order to measure quality more accurately using best practices, Healthcare Effectiveness Data and Information Set (HEDIS®) measures utilize exclusions for advanced illness and frailty. These exclusions change the eligible population (denominator) for some HEDIS measures.

The information in this flyer reflects HEDIS specifications but is not meant to preclude clinical judgment. Treatment decisions should always be based on the clinical judgment of the physician or other healthcare provider.

Who will be excluded from these measures?

Exclusion criteria	Applicable HEDIS measures
Patients 66 years of age and older by the end of the measurement year with both frailty and advanced illness	Medicare Star measures <ul style="list-style-type: none"> Breast Cancer Screening (BCS-E)* Colorectal Cancer Screening (COL-E)* Eye Exam for Patients With Diabetes (EED)* Glycemic Status Assessment for Patients With Diabetes (GSD)* Statin Therapy for Patients With Cardiovascular Disease (SPC)*
	Medicaid measures <ul style="list-style-type: none"> Blood Pressure Control for Patients With Diabetes (BPD)* Statin Therapy for Patients With Diabetes (SPD)* Use of Imaging Studies for Low Back Pain (LBP)
Patients 66–80 years of age as of Dec. 31 of the measurement year with both frailty and advanced illness	Medicare Star measures <ul style="list-style-type: none"> Controlling High Blood Pressure (CBP)* Kidney Health Evaluation for Patients With Diabetes (KED)*
	Medicaid measures <ul style="list-style-type: none"> Adherence to Antipsychotic Medications for Individuals With Schizophrenia (SAA) Cardiac Rehabilitation (CRE)* Persistence of Beta-Blocker Treatment After a Heart Attack (PBH)* Statin Therapy for Patients With Diabetes (SPD)*
Patients 67–80 years of age as of Dec. 31 of the measurement year with both frailty and advanced illness	Medicare Star measures <ul style="list-style-type: none"> Osteoporosis Management in Women Who Had a Fracture (OMW)

* Measures are both Medicare and Medicaid

Patients 81 years of age and older as of Dec. 31 of the measurement year with at least two indications of frailty	Medicare Star measures <ul style="list-style-type: none"> Controlling High Blood Pressure (CBP)* Kidney Health Evaluation for Patients With Diabetes (KED)* Osteoporosis Management in Women Who Had a Fracture (OMW)
	Medicaid measures <ul style="list-style-type: none"> Adherence to Antipsychotic Medications for Individuals With Schizophrenia (SAA) Cardiac Rehabilitation (CRE)* Persistence of Beta-Blocker Treatment After a Heart Attack (PBH)

Patients will be excluded when there is evidence of:

- Frailty** – at least two indications of frailty with different dates of service during the measurement year for conditions such as pressure ulcers, durable medical equipment usage or services such as home health and skilled nursing, which are indicators of limited mobility or physical functionality
- Advanced illness** – either two indications of advanced illness on at least two different dates of service for severe chronic conditions such as emphysema, cirrhosis, leukemia, heart failure, dementia and end-stage renal disease or a dispensed dementia medication
- Palliative care** – patients receiving palliative care

Which measures are impacted?

In the table below are the HEDIS measures to which these exclusions have been added. Many of these measures are also part of the Five-Star Quality Rating System governed by the Centers for Medicare & Medicaid Services (CMS).

Exclusion criteria	Applicable HEDIS measures
Patients receiving palliative care	Medicare Star measures <ul style="list-style-type: none"> Breast Cancer Screening (BCS-E)* Colorectal Cancer Screening (COL-E)* Controlling High Blood Pressure (CBP)* Eye Exam for Patients With Diabetes (EED)* Glycemic Status Assessment for Patients With Diabetes (GSD)* Kidney Health Evaluation for Patients With Diabetes (KED)* Osteoporosis Management in Women Who Had a Fracture (OMW) Statin Therapy for Patients With Cardiovascular Disease (SPC)*
	Medicaid measures <ul style="list-style-type: none"> Blood Pressure Control for Patients With Diabetes (BPD)* Cardiac Rehabilitation (CRE)* Cervical Cancer Screening (CCS) Use of Imaging Studies for Low Back Pain (LBP) Statin Therapy for Patients With Diabetes (SPD)* Risk of Continued Opioid Use (COU)*

* Measures are both Medicare and Medicaid

How will patients be identified for exclusion?

Codes from the National Committee for Quality Assurance (NCQA) Advanced Illness Value Set and/or Frailty Value Sets for devices, diagnoses, encounters and symptoms are used to identify patients who will be removed from the impacted measures' eligible populations. Patients can only be excluded via appropriate and applicable coding on submitted claims. Medical records and other proof of service documents cannot be used to identify patients with advanced illness and frailty; however, they can be used for palliative care exclusions.

- Advanced illness exclusions are based on any of the following claim(s) with an advanced illness code during the current or prior year for:
 - Two outpatient visits on different dates of service
 - A dispensed dementia medication
- Palliative care exclusions are based on any single claim with a palliative care code during the current year.

Dementia medications

Cholinesterase inhibitors	• Donepezil • Galantamine • Rivastigmine
Miscellaneous central nervous system agents	• Memantine
Dementia combinations	• Donepezil-memantine

The following table outlines the Current Procedural Terminology (CPT®), Healthcare Common Procedure Coding System (HCPCS) and International Classification of Diseases, Tenth Revision (ICD-10) diagnosis codes for each of these value sets. The coding information in this document is subject to changing requirements and should not be relied on as official coding or legal advice. All coding should be considered on a case-by-case basis and supported by medical necessity and appropriate documentation in the medical record.
