Products Affected

pemetrexed disodium intravenous powder for solution
pemetrexed disodium intravenous solution
pemetrexed intravenous powder for solution
pemetrexed intravenous solution
Alimta intravenous solution
Pemfexy intravenous solution

Listed Indications

[Malignant Pleural Mesothelioma](#)

[Bladder Cancer](#)

[Cervical Cancer](#)

[Ovarian Cancer](#)

[Thymic Malignancy](#)

[Non-small cell lung cancer \(Non-squamous\)](#)

Malignant Pleural Mesothelioma

Does the member meet all of the following criteria?

Criteria #1	The member must have a diagnosis of malignant pleural mesothelioma
Criteria #2	<ul style="list-style-type: none">The member must be using pemetrexed as induction therapy in combination with carboplatin or cisplatin for medically operable clinical stage I-III ORThe member must be using pemetrexed as a single agent or in combination with cisplatin or carboplatin ORThe member is using pemetrexed as second-line as a single agent if not administered first-line ORPemetrexed is being used in combination with bevacizumab product and cisplatin

Does the member have any of the following exclusions? If yes, approval may not be appropriate.

NOTE: Experimental/Investigational Use – Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.

Exclusion #1	Creatinine clearance (CrCl) < 45 ml/minute
--------------	--

Approval Duration

Initial	Pemetrexed will be approved in plan year durations or as determined through clinical review.
---------	--

[Back to top](#)

Bladder Cancer

Does the member meet all of the following criteria?

Criteria #1	The member must have a diagnosis of metastatic bladder cancer
Criteria #2	Pemetrexed is being used as second-line or subsequent therapy as a single agent for metastatic disease

Does the member have any of the following exclusions? If yes, approval may not be appropriate.

NOTE: Experimental/Investigational Use – Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.

Exclusion #1	Creatinine clearance (CrCl) < 45 ml/minute
--------------	--

Approval Duration

Pemetrexed Products

Cervical Cancer	
Does the member meet all of the following criteria?	
Criteria #1	The member must have a diagnosis of cervical cancer
Criteria #2	Pemetrexed is being used as a second-line or subsequent therapy as a single agent for local/regional recurrence or distant metastases
Does the member have any of the following exclusions? If yes, approval may not be appropriate.	
NOTE: Experimental/Investigational Use – Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.	
Exclusion #1	Creatinine clearance (CrCl) < 45 ml/minute
Approval Duration	
Initial	Pemetrexed will be approved in plan year durations or as determined through clinical review.

[Back to top](#)

Ovarian Cancer	
Does the member meet all of the following criteria?	
Criteria #1	The member must have a diagnosis of Ovarian Cancer, or Epithelial Ovarian Cancer/Fallopian Tube Cancer/Primary Peritoneal Cancer
Criteria #2	Pemetrexed is being used as a single agent for persistent disease or recurrence therapy.
Does the member have any of the following exclusions? If yes, approval may not be appropriate.	
NOTE: Experimental/Investigational Use – Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.	
Exclusion #1	Creatinine clearance (CrCl) < 45 ml/minute
Approval Duration	
Initial	Pemetrexed will be approved in plan year durations or as determined through clinical review.

[Back to top](#)

Thymic Malignancy	
Does the member meet all of the following criteria?	
Criteria #1	The member must have a diagnosis of thymic malignancy
Criteria #2	Pemetrexed is being used as second-line therapy as a single agent .
Does the member have any of the following exclusions? If yes, approval may not be appropriate.	
NOTE: Experimental/Investigational Use – Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.	
Exclusion #1	Creatinine clearance (CrCl) < 45 ml/minute
Approval Duration	
Initial	Pemetrexed will be approved in plan year durations or as determined through clinical review.

- If EGFR, ALK, ROS1 BRAF negative and PD-L1 less than 1% **AND one of the following applies:**
 - Pemetrexed is being used in combination with cisplatin or carboplatin therapy for the initial treatment in members with a performance status (PS) 0-2 **OR**
 - Pemetrexed is being used in cisplatin or carboplatin-based regimens in combination with bevacizumab product in members with PS 0-1 and no history of hemoptysis **OR**
 - As a single agent in members with PS 2 **OR**
- If EGFR, ALK, ROS1, BRAF positive and PD-L1 greater than or equal to 1% and after prior therapy **AND one of the following applies:**
 - Pemetrexed is being used in combination with cisplatin or carboplatin as subsequent therapy in members with a performance status (PS) 0-2 **OR**
 - Pemetrexed is being used in cisplatin or carboplatin-based regimens in combination with bevacizumab product in members with PS 0-1 and no history of hemoptysis as subsequent therapy **OR**
 - As a single agent in members with PS 2 as subsequent therapy **OR**
- Pemetrexed is being used as a single agent after prior chemotherapy **OR**
- Pemetrexed is being used as a single agent for the maintenance treatment of members whose disease has not progressed after four cycles of platinum-based first-line chemotherapy **OR**
- As a single agent for recurrence or metastasis in members who achieved tumor response or stable disease following first-line chemotherapy with Pemetrexed **OR**
- Pemetrexed is given in combination with Keytruda (pembrolizumab) and carboplatin or cisplatin as first line therapy for nonsquamous metastatic NSCLC followed by maintenance Keytruda (pembrolizumab) in combination with Pemetrexed **OR**
- In combination with cisplatin used as neoadjuvant or adjuvant chemotherapy **OR**
- Concurrent chemoradiation in combination with carboplatin or cisplatin

Does the member have any of the following exclusions? If yes, approval may not be appropriate.

NOTE: Experimental/Investigational Use – Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.

Exclusion #1	Squamous cell non-small cell lung cancer.
Exclusion #2	Creatinine clearance (CrCl) < 45 ml/minute

Approval Duration

Initial	Pemetrexed will be approved in plan year durations or as determined through clinical review.

Background

This is a prior authorization policy about Pemetrexed.

Refer to the current Full Prescribing Information for specific recommendations about dose adjustments.

Pemetrexed is a pyrimidine-based folate analog that suppresses tumor growth by inhibiting both DNA synthesis and folate metabolism at multiple target enzymes. The multiple enzyme inhibition is unique, as methotrexate inhibits only dihydrofolate reductase, and 5-fluorouracil and raltitrexed inhibit only thymidine synthetase. Thus, Alimta (pemetrexed) may be useful for 5-fluorouracil-, methotrexate-, and raltitrexed-resistant cancers.

Pemetrexed acts as a 'multitargeted' antifolate compound by interrupting both purine synthesis via thymidylate synthase (TS) and dihydrofolate reductase (DHFR) inhibition, and pyrimidine synthesis via glycinamide ribonucleotide formyl transferase (GARFT) and aminoimidazole carboxamide

formyl transferase (AICARFT) inhibition, which are all key enzymes involved in folate metabolism.

Pemetrexed is FDA approved for unresectable mesothelioma and metastatic/advanced nonsquamous non-small cell lung cancer (NSCLC). Pemetrexed is not indicated for the treatment of squamous cell NSCLC.

Pemetrexed is available as Alimta as 100 mg and 500 mg powder for injection, Pemfexy 500 mg in single-use vials.
