

Humana interoperability solutions for Medicaid providers

Overview

Interoperability facilitates secure and timely data exchange between Humana and healthcare providers. This seamless connectivity supports improved care coordination, reduces administrative burden and enhances health outcomes for Medicaid members.

Key benefits for Medicaid providers

- **Reduces administrative burden:** Automated medical record retrieval and data sharing minimize manual tasks for providers.
- **Improves care coordination:** Real-time access to critical data—including patient admissions, discharges and transfers—enables timely and informed clinical decisions.
- **Supports value-based care:** Point-of-care alerts within the electronic health record (EHR) help close gaps in care and enhance quality measures.
- **Faster authorizations and claims:** Integration of authorization and claims data within the workflow can help reduce denials and streamline payment processes.
- **Regulatory alignment:** Interoperability solutions are designed to help meet Centers for Medicare & Medicaid Services (CMS) and state requirements for secure data exchange.

Available interoperability solutions

- **Medical Record Retrieval (MRR):** Enables seamless and automated exchange of clinical records with Humana.
- **Actionable Insights:** Provides actionable data and care gap alerts directly within your EHR workflow.
- **ADT alerts:** Delivers real-time notifications regarding patient hospital admissions, discharges and transfers.
- **Supplemental data:** Offers enhanced quality and risk data to support improved reporting.
- **Digital ID and Coverage Finder:** Facilitates access to patient coverage and identification information at the point of care.
- **Medical authorization:** Streamlines the process for electronic prior authorizations.

Note: Solution availability varies by electronic medical record (EMR) system. Not all features are supported in every electronic health record (EHR).

Next steps

- **Contact your provider engagement professional** to discuss available solutions to optimize quality and efficiency.
